NOTES: A. This chart illustrates the present view of a long term plan (30-40 years) for designating central offices in Nevada and Northern California with three-digit codes which will fit into the numbering plan pattern for nationwide dialing of toll calls. The Nevada and Northern California numbering plan area includes Nevada and that portion of California from and including the Eureka, Red Bluff and Truckee toll center areas north to the Oregon line.

B. The entry "5" at the extreme right of an office code assignment indicates that it is planned to have five digits in the listed numbers of stations served by the office. The office numeral of a five-digit office corresponds to the third digit of the proposed toll dialing code. It is planned that, in dialing toll calls to five-digit offices, operators will prefix the first two letters of the exchange name to the listed five-digit number. In dialing toll calls to stations having four or less digits in the listed number, operators will prefix the arbitrary three-digit code indicated above.

C. Symbol meanings are as follows:

I = Independent Co. exchange.

C. = California.

N. = Nevada.

O. = Oregon.

MR = Mobile radio telephone roaming units.

MNR = Mobile radio telephone non-roaming units.

MSS = Mobile radio telephone signaling service units.

= Oregon office in Klamath Falls or Medford toll center area. Redding is assumed to be the primary outlet for these toll centers.

D. Quincy, whose initial letter does not appear on the telephone dial, is assigned the arbitrary code 752. For other exchanges, the first two letters of the exchange name correspond to the first two digits of the office code for toll dialing purposes, with the following exceptions:

Cave Junction, O. 396 Selma, O. 758

- NOTES: A. This tabulation and the attached map, which shows the geographical grouping of the codes listed above, illustrate the present view of a long-term plan (30-40 years) for designating central offices in the S.F.-E.B. and Marin Co. extended areas with three-digit codes which will fit into the numbering plan pattern for nationwide dialing of toll calls. The first two digits of a code correspond to the first two letters of the ultimate office name. Office names are shown with the first two letters capitalized. Offices for which names have not yet been selected are indicated with an asterisk (*).
- B. It is planned that ultimately all offices shown will operate on a seven-pull basis, i.e., with a two-letter one-numeral office code followed by four digits of the station number. The number of dial pulls now required to reach a station in an existing office, excepting certain manual stations, is shown in parentheses () to the right of each office to which it applies. (4) indicates now working 4 pulls or less.
- C. Most of the codes for which no office entries appear on this chart are tentatively assigned to other Central California offices (outside of S.F.-E.B. and Marin County extended areas) which will be in the same numbering plan area. It is not planned to use 0 (zero) as the third pull of an office code. Codes reserved for mobile radio service are indicated in code blocks 55, 57, 95 and 97 with the letter "M". Assigned codes not available at present due to translator limitations are marked with the letter "T".
- D. It is planned that the eight small exchanges in Washington township - Alvarado, Centerville, Decoto, Irvington, Newark, Niles, Mission San Jose and Warm Springs - will have five-digit numbers and that the first two letters of the exchange name will be prefixed to the called number in dialing these exchanges from other exchanges.
- E. It is planned to discontinue office names marked with a number sign (#) when these offices are converted to dial operation.

NOTES: A. This chart illustrates the present view of a long term plan (30-40 years) for designating central offices in Central California with three-digit codes which will fit into the numbering plan pattern for nationwide dialing of toll calls. The Central California numbering plan area includes approximately that portion of the state north from the Southern Area line to, but excluding, the Eureka, Red Bluff and Truckee toll center areas.

B. The entry "7" or "5" at the extreme right of an office code assignment indicates the number of digits it is planned to have in the listed numbers of stations served by the office. Office names which have been selected for seven-digit operation are shown with the first two letters capitalised. The office numeral of a five-digit office corresponds to the third digit of the proposed toll dialing code. It is planned that, in dialing toll calls to five-digit offices, operators will prefix the first two letters of the exchange name to the listed five-digit number. In dialing toll calls to stations having four or less digits in the listed number, operators will prefix the arbitrary three-digit code indicated above.

C. Symbol meanings are as follows:

I = Independent Co. exchange.

X = Temporary office code assignment.

* = Office name not yet selected for seven-digit operation.

MR = Mobile radio telephone roaming units.

MNR = Mobile radio telephone non-roaming units.

MSS = Mobile radio telephone signaling service units.

D. Exchanges, outside S.F.-E.B., whose first two letters do not correspond to the first two digits of the proposed office code, are as follows:
