

Alternative Driver for 60A Selector

Aug 3, 2009

Steve Flocke
Lyndhurst OH

This circuit allows a standard 10pps Dial to operate a 60A RR Selector.

The relays are not special, but L, P1, P2 should be relatively fast operate. Also L contact should travel from Make to Break and Break to Make in less time than the release time of P1 or P2.

This revision eliminated the Make before Break contacts of P2 and substituted diodes which are of the 1N4004-7 series.
