

POLARITY GUARDS

IDENTIFICATION

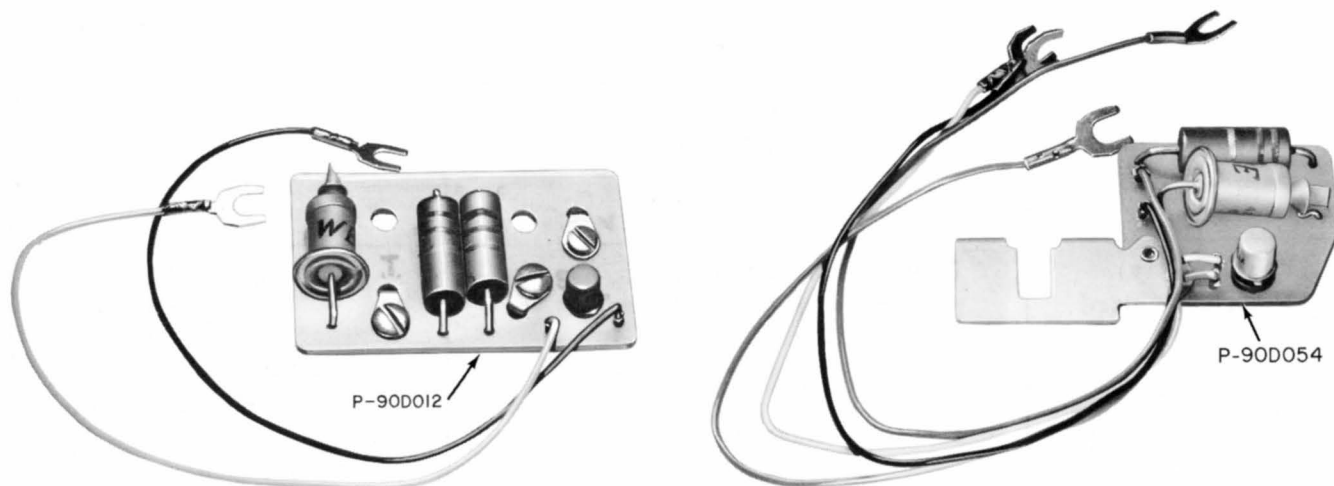

Fig. 1 — Guard Assemblies

1. PURPOSE

1.01 Used in conjunction with TOUCH-TONE® dials to maintain correct polarity for end-to-end signaling.

2. DESIGN FEATURES

- Available in two physical arrangements shown in Fig. 1.
- Composed of a series of diodes, resistors, and a surge protector mounted on a printed circuit board and connected in the telephone set by screw terminals and/or spade tipped leads.
- Circuit diagrams shown in Fig. 2.

3. APPLICATION

3.01 Polarity guards can be added, when required to most existing TOUCH-TONE sets manufactured after late 1966.

3.02 Speakerphone and sets having G6 or G8 handsets will require new 25-type dials when a polarity guard is added.

3.03 Refer to appropriate connection section before installing, to prevent damage to the surge protectors.
