

COIN TELEPHONE
SECURITY FASTENER

1. GENERAL

1.001 This addendum supplements Section 506-101-902SW and is issued to provide instructions for ordering Security Fasteners of sizes other than the standard 4" size.

2. DESCRIPTION

2.01 (Change this paragraph to read as follows:)

The Security Fastener is an expendable bolt bracket used to secure coin collector back-boards to walls. The standard Security Fastener stocked by the manufacturer will accommodate a wall or other mounting surface which may vary in thickness from 4" to 7 5/8". Due to the design of the bolt and the threaded shaft, it is not necessary to cut the bolts to different lengths for varying thickness of walls within the above dimensions. Where thicker walls are encountered longer bolts can be obtained locally and used. For walls less than 4" thick special Security Fasteners may be ordered from the manufacturer having minimal thickness of 2 or 3 inches (see paragraph 4.01). It is intended that the Security Fastener when installed should straddle a stud or other wall supporting structure so that maximum strength is obtained.

3. ORDERING INFORMATION

3.01 (Change this paragraph to read as follows:)

The Security Fastener may be ordered from Western Electric Company using normal ordering procedures. The item is stocked by the manufacturer in a standard 4" minimal length; however, any length desired will be provided in quantities of 10 or more when specifically requested. The item should be ordered as follows:

(Qty.) Fastener, Security (Give minimal length desired, e.g., 2", 3", 5", etc. If no length is given 4" will be shipped.)

Order From:

Cross Brothers
