

## 139A TEST SET (LINE TONE EMITTER)

### 1. GENERAL

**1.001** This addendum supplements Section 105-242-100, Issue 2.

**1.002** This addendum is issued to add information on use of the test set in very cold temperatures and to add a caution concerning the use of the test set on working lines.

### 2. CHANGES TO SECTION

#### ISSUE 1 CHANGES

**2.001** Add new paragraph as follows:

**2.01.1** In the event that the test set becomes inoperative at very low temperatures using the KS-14368 batteries, Eveready\* E91 (alkaline) batteries may be used for improved low temperature performance.

\*Registered Trademark of Union Carbide Corp.

*Caution: Alkaline batteries of some other manufacturers have been known to explode under certain conditions; therefore, only Eveready E91 should be used. Batteries should be removed from the test set when suspected to be in a weak condition.*

**2.002** Add the following caution at the end of paragraph 3.02:

*Caution: Do not connect the 139A test set to a working circuit except in the arrangement shown in Fig. 5—Line Verification. If the test set switch is left in the TONE position, the tone may interfere with subscriber's use of the line and result in customer trouble reports. If the switch is left in the TALK position on a working line, damage to the test set may result.*
