

# “CONFERENCE 2000” TELECONFERENCE TERMINAL

## QTAF-TYPES

### DESCRIPTION, INSTALLATION, OPERATION, MAINTENANCE, AND CONNECTIONS

Fig. 1 — CONFERENCE 2000

CONTENTS	PAGE
1. GENERAL.....	2
2. CONTROLS, JACKS AND INDICATOR...2	2
3. INSTALLATION.....	4
4. OPERATION.....	5
5. MAINTENANCE.....	5
6. CONNECTIONS.....	6

**Reason for Reissue:** This practice is reissued to update descriptions of previously available models and to incorporate information on the QTAF2D3 type for U.S. application.

## 1. GENERAL

1.01 The CONFERENCE 2000 teleconference terminal permits voice-switched handsfree conversation between two or more geographically separated groups. CONFERENCE 2000 is powered by a separate transformer, and it can be operated at any location where a telephone jack and an ac outlet are readily available.

1.02 The CONFERENCE 2000 differs from a COMPANION\* or LOGIC\* handsfree unit in that the omnidirectional microphone and loudspeaker are located in the acoustic unit. An automatic gain control and amplifier circuit is incorporated to limit the signal level to the line for persons who may be seated close to the microphone or speak louder than necessary.

1.03 The CONFERENCE 2000 is available in four models: the QTAF2A3, the QTAF2B3, the QTAF2C3 and the QTAF2D3. All models comprise the following primary items:

- Acoustic unit
- Acoustic unit cable
- Control module
- Chairman's earphone †
- Power supply.

**Note:** Refer to Table A for comparative model listing of field replaceable standard items and optional equipment.

1.04 The QTAF2A3 and QTAF2B3 models replace the QTAF2A1. The QTAF2C3 model CONFERENCE 2000 replaces the QTAF2D1, and includes the optional NE-D16QD control module mounting cord as standard equipment. The NE-D16QD cord is used to connect the control module to other than LOGIC-type telephone sets; this optional cord is also available for use on the QTAF2A3 and QTAF2B3 and QTAF2D3. The QTAF2D3 model is U.L. listed and for the U.S. Market.

1.05 If required, customer-provided external microphones and mixer may be used with the CONFERENCE 2000.

## 2. CONTROLS, JACKS AND INDICATOR

2.01 **Volume Control.** This control permits the user to adjust the volume of the loudspeaker to the desired level. It does not affect the level of the transmitted signal.

2.02 **Earphone Control.** This control permits the adjustment of the volume of the earphone to the desired level. The control does not affect the level of the transmitted signal.

2.03 **Tone Control.** This rotary control permits the user to reduce the receive signal level for frequencies higher than 1 kHz. It is useful on short line loops where there is less attenuation of the higher frequencies.

2.04 **Microphone Switch.** This rotary switch permits the following:

- Selection of internal microphone
- Selection of external microphone
- Switching off of all microphones.

**Fig. 2 — Control Module**

† Not included with QTAF2A3 model.

\*COMPANION and LOGIC are trademarks of Northern Telecom Limited

2.05 **Indicator Lamp.** The red Light-Emitting Diode (LED) indicates the operating mode of the teleconference terminal. This diode is lit when the terminal is in transmit mode and extinguished when the terminal is in receive mode.

2.06 **Earphone Jack.** This feature permits the optional use of the earphone. The user of the earphone may monitor the line inputs which originate from all points on the teleconference.

2.07 **Record Jack.** This feature permits the connection of a tape recorder to record all conversation.

2.08 **PA Jack.** This feature permits the connection of a public address system which will allow a larger group to monitor the conversation.

2.09 **On Key.** This piano-type key must be depressed momentarily to answer an incoming call when the handset is on-hook, or before commencing on-hook dialing. The key must be held depressed during transfer from handset to handsfree operation. The key may be held depressed to hold a call on the terminal with both transmission and reception inhibited. The key is designated by a green identification symbol on the key face.

2.10 **Off Key.** This piano-type key must be momentarily depressed to terminate a call on the terminal. The key is designated by a red identification symbol on the key face.

2.11 **Mute Key.** This piano-type key may be depressed during a call to inhibit transmission without affecting reception. The key is designated by an amber identification symbol on the key face.

□ Not required by Bell Canada

### 3. INSTALLATION

#### Location

3.01 For best acoustic performance, the CONFERENCE 2000 should be installed in a room which does not exceed 25 ft. (7.6m) in length or width, with a maximum height of 9 ft. (2.7m). The walls, floor and ceiling should also be acoustically treated to minimize echo effect (i.e., carpet on floor, a hard surface ceiling, drapery covering windows, etc.).

3.02 The acoustic unit should be positioned a minimum of 3 ft. (0.9m) from any wall and should be centrally located on the conference table approximately equidistant from all participants.

3.03 No participant should be more than 10 ft. (3.1m) from the acoustic unit. The surface of the table directs the voice input; positioning the acoustic unit on a pedestal adversely affects the performance of the product.

#### Power Supply

3.04 Input power to the CONFERENCE 2000 is provided through a power supply comprising a transformer and a 12 ft. (3.7 m) long, two-conductor cord terminated by a power plug. The transformer steps the voltage down from 115 Vac to 16 Vac and is capable of delivering a current of 375mA. The power plug connects into the power jack on the rear of the control module.

#### Connection to LOGIC Telephone Sets

3.05 To connect the CONFERENCE 2000 to LOGIC-type telephone sets proceed as follows:

- (1) Hold the telephone set in the right hand with the dial forward.

- (2) Hold the control module in the left hand with the face forward.

- (3) Tilt the upper edge of the control module towards the upper edge of the telephone set and bring the set and module together so that the plug is firmly in the socket.

#### Connection to SL-1 Electronic Telephone Sets (LOGIC-style)

3.06 The CONFERENCE 2000 can be connected to a LOGIC-style SL-1 set by following the procedure outlined in 3.05. For proper operation however, it is necessary to make minor wiring modifications to the SL-1 set and add either a QKK1E Handsfree Interface Kit (A0283601) or a QKK3B Automatic Handsfree Interface Kit (A0283608). When a QKK-type kit is used, external power to the control module is not required; refer to Chart 3-5 of Practice 553-2001-211 for complete details (Wiring of the CONFERENCE 2000 is similar to the QUS1C LOGIC handsfree unit.)

3.07 For connection to other than LOGIC-type telephone sets, including NE-500- and NE-2500-type SL-1 sets, the NE-D16QD mounting cord must be used. Refer to Tables B and C.

#### Connection to SM-1 Telephone Sets (LOGIC-style)

3.08 The CONFERENCE 2000 can be connected to a LOGIC-style SM-1 set by following the procedure outlined in 3.05. For proper operation however, it is necessary to make minor wiring modifications to the SM-1 set and add a QKK2C Interface Kit (A0272575). For complete connection instructions refer to Practice 502-8771-200 for the SM-1 telephone set or Practice 518-8011-210 for the SM-1 system. (Wiring of the CONFERENCE 2000 is similar to the QUS1C LOGIC handsfree unit.)

## External Microphones

3.09 When the background noise level is so high that the called party may have difficulty hearing, external microphones located in closer proximity to the participant may improve the transmission quality. When more than one external microphone (customer-provided) is essential, a standard microphone mixer (customer-provided) is required.

**Notes:** Customer-provided microphones should meet the following specifications:

- Dynamic
- 10,000 ohm impedance
- 1/4 in. (6.4mm) plug.

Although 600-ohm, electret-type lapel microphones perform well, the battery requirement (3- to 6-hour operational use) may lead to frequent battery replacement.

3.10 The microphone mixer should be centrally located, adjacent to the acoustic unit. This ensures that the external microphones are positioned approximately equidistant from the acoustic unit.

**Note:** Commercially available active mixers (equipped with self-contained amplification circuits) can be connected to the CONFERENCE 2000 mixer jack located at the back of the control unit. When external microphones are in use, the microphone switch on the front of the control unit must be set to the **mic ext** position.

3.11 When the microphone mixer cable is not long enough to provide a central location for the acoustic unit, an add-on extension cord will be required.

3.12 On completion of the CONFERENCE 2000 installation, the operation tests described in Chart 1 must be performed.

## 4. OPERATION

4.01 For best operation, the following distance and speech guidelines should be observed:

- Conference participants should be seated not closer than 3 ft. (0.9m) or further than 10 ft. (3.1m) from the acoustic unit.
- Speech should be at normal conversation level. Lower levels of speech do not operate the voice switching circuit and, consequently, are not transmitted. The level of speech must be raised as the distance from the acoustic unit is increased.

**Note:** The voice-switching circuit permits transmission of speech in one direction at a time. The circuit switches to transmit when you speak and to receive when the distant party responds.

4.02 The acoustic unit represents the called party. Speech should be directed toward the acoustic unit at all times. Speech directed away from the unit sounds hollow at the called party location.

## 5. MAINTENANCE

5.01 If the CONFERENCE 2000 must be returned for repair, it should be packaged using the cartons listed in Table A to protect against damage during shipping.

5.02 The CONFERENCE 2000 should be treated as a piece of fine furniture (especially the acoustic unit), and should not be subjected to temperature extremes during use, storage or shipment.

**6.0 CONNECTIONS**

6.01 The CONFERENCE 2000 is available as follows:

- Equipped with a 15-pin connector which is compatible with LOGIC-style telephone sets.

- An optional NE-D16QD mounting cord (standard on QTAF2C3) is available for connection to single-line or multiline telephone sets. The NE-D16QD cord converts the modular connection to spade-tip connectors.

6.02 Refer to Tables B and C for CONFERENCE 2000 connection information.

### CHART 1 OPERATION TESTS

**Note:** This procedure tests all the operating features of an installation. If a test cannot be completed satisfactorily, refer to the Fault Location Guide (Chart 2).

STEP	ACTION	VERIFICATION
1	Depress ON key momentarily.	Indicator lamp lit, dial tone heard on loudspeaker, indicator lamp extinguished.
2	Rotate VOLUME control clockwise.	Volume of dial tone increases.
3	Dial first digit of test centre number.	Dial tone silenced, indicator lamp lit.
4	Complete dialing of test centre number.	Ringing heard, test centre answers.
5	Lift handset.	Speech transferred from loudspeaker to handset, indicator lamp extinguished.
6	Hold ON key depressed, replace handset, release ON key.	Indicator lamp lit. Speech transferred from handset to loudspeaker on release of ON key.
7	Ask test center to talk, then hold MUTE key depressed for 20 seconds and talk.	Speech heard on loudspeaker while key depressed. Test center does not hear speech. Operation normal after test.
8	Ask test centre to talk and continue talking while holding ON key depressed for 20 seconds.	Indicator lamp lit but no speech heard by either party. Operation normal after test.
9	Request test center to call back after call terminated, depress OFF key.	Indicator lamp extinguished. No speech on loudspeaker. Ringing heard when test center returns call.
10	Depress line pickup key if telephone set is so equipped. Depress ON key momentarily.	Ringing stops, indicator lamp lit. Speech heard on loudspeaker.
11	Operate HOLD key if telephone set is equipped with it.	Speech no longer heard from loudspeaker, indicator lamp lit, line-hold feature (flashing line lamp) operates in telephone set.
12	Operate line pickup key if telephone set is equipped with it.	Speech heard on loudspeaker, line-hold feature releases in telephone set.
13	Lift handset.	Speech transferred from loudspeaker to handset. Indicator lamp extinguished, handset operation normal.
14	Replace handset.	Call terminated.
15	Switch from internal to external microphone if applicable. Dial test center number.	Speech transmission normal.

## CHART 2 FAULT LOCATION GUIDE

FAULT INDICATION	ACTION
Indicator lamp does not light.	<p>Hold ON key depressed. Indicator lamp should light; if not lit:</p> <ul style="list-style-type: none"> <li>● Check power transformer connections</li> <li>● Check power source</li> <li>● Check transformer output.</li> </ul> <p>If fault remains, it is a circuit defect. Replace control module.</p>
No speech or dial tone on loudspeaker.	<p>Lift handset, check for presence of speech. If speech is present:</p> <ul style="list-style-type: none"> <li>● Check ring and tip connections from telephone</li> <li>● Check that P3 and P4 leads are not shorted</li> <li>● Check connections from acoustic unit to control module.</li> </ul> <p>If fault remains, replace control module or acoustic unit.</p>
Indicator lamp is extinguished when transmitting with no receive signal present.	This is a circuit defect. Replace control module.
Speech remains on loudspeaker or lamp remains lit when handset is lifted.	Check connections in telephone set. If fault remains, replace control module.
Far-end party hears speech with MUTE key depressed.	Replace control module.
No receive speech heard with MUTE key depressed.	Replace control module.
When ON key is depressed, speech remains on loudspeaker or audio transmission continues.	Replace control module.
When OFF key is depressed, indicator lamp remains lit or speech remains on loudspeaker.	Replace control module.
When OFF key is depressed, indicator lamp remains lit or speech remains on loudspeaker.	Replace control module.
If on-hook dialing is provided, dial tone remains on loudspeaker after dialing first digit.	<p>Check normal handset dialing. Also check tip and ring connections from telephone set to control module.</p> <p>If fault remains, replace control module.</p>
On multiline telephone sets equipped with hold feature, hold does not work.	<p>Check that hold feature works with handset, and check connections in telephone set.</p> <p>If fault remains, replace control module.</p>
With on-hook dialing, dial pulses heard on loudspeaker.	<p>Check P3 and P4 connections in telephone set.</p> <p>If fault remains, replace control module.</p>
