

SUBSCRIBER SETS

Local Battery Anti-Sidetone Subscriber Sets

FOR USE IN COMMON BATTERY CENTRAL OFFICE AREAS

There has been made available a local battery anti-sidetone station equipment which is suitable for use in long central office loops, long P.B.X. extensions, foreign exchange lines, etc., where better transmission is desired than is afforded by the old type equipment. The new Subscriber Sets described below provide appreciable effective gains compared with sets using both the No. 13 and 46 Coils and proposed common battery anti-sidetone sets. These improvements are due to the use of the No. 62 induction coil, local batteries and special receivers which are further described in this catalog.

Wiring diagram No. 634BB Subscriber Set

NO. 634BB SUBSCRIBER SET

The No. 634BB Subscriber Set is an anti-sidetone common battery set with enclosed gongs, metal case finished in black. Intended for use in long subscriber loops, and P.B.X. extensions in either manual or dial systems. Consists of apparatus as shown below.

Code No.	Ringers	Gongs	Condenser	Induc- tion Coil	Resist- ance	Retarda- tion Coil
