1. GENERAL

1.01 This section is Part 29 in a series of sections for testing combined and completing markers.

1.02 The reasons for reissuing this section are listed below. Revision arrows are used to emphasize the more significant changes. This issue affects the Equipment Test Lists.

(a) To indicate that Test CZ does not apply in offices equipped with Electronic Translation System (ETS).

(b) To exclude under verification in all tests, reference to “class of test” lamps.

(c) To make minor changes as required.

1.03 The test covered is:

**CZ. Traffic Sampling Feature by Selected Trunk Group—ETS Not Provided**

The following features are checked: (1) Traffic sampling circuit used (TGTS key at MTF operated)—tests billed and nonbilled SOG and IAO routes equipped with TGTS features. Sampled and nonsampled test calls are made to trunk groups partially or fully AMA-equipped. (2) MTF simulates traffic sampling circuit (TGTS key normal)—test billed or nonbilled SOG routes equipped with TGTS features. Sampled and nonsampled test calls are made to trunk groups partially or fully AMA-equipped. Cross-connections for 100 percent traffic sampling are also tested. Also see test on **Marker to Distributor and Scanner (DAS) Lead Verification** for testing the NSP and SMP leads to the DAS when LAMA-C is provided.

1.04 Lettered Steps: A letter a, b, c, etc, added to a step number in Part 3 of this section indicates an action which may or may not be required depending on local conditions. The condition under which a lettered step or a series of lettered steps should be made is given in the ACTION column, and all steps governed by the same condition are designated by the same letter within a test. Where a condition does not apply, the steps designated by that letter should be omitted.

1.05 The manner of selecting some circuits and test conditions at the master test frame (MTF) and its associated circuits varies depending on the apparatus options furnished with these circuits. Therefore, where variable means of selection are provided, precise instructions for the selection of circuits and test conditions are not given. Precise instructions for the use of these variable means are given in Section 218-106-301.

1.06 The location statement, At MTF—, is used to refer to all apparatus located on the four basic bays of the MTF.

1.07 On issue 76D of SD-25800-01, a group of 18 “class of test” lamps was replaced by a single “start test” lamp designated STT. Since the designation given to the lamp is not specific, the lamp will not be called out in the section, as well as the 18 discontinued lamps, DT, ORIG, ITDO, ITNP, OGT, INC, OR, SDR, IR, MISC, IAO, MLV, LT, IMS, PTT, TVT, ATNT, and IMT.

1.08 When the office is arranged for LAMA-C the distributors and scanners associated with the marker and trunk used in the test call must be in service or in a **maintenance-busy** condition—not in an **out-of-service** condition. To change a scanner or distributor from an
SECTION 218-122-529

**out-of-service** to a **maintenance-busy** condition, use the procedure given in the following section.

**1.09** Additional test procedures are available for verification of leads between the completing marker and the distributor and scanner (DAS).

Refer to Section 218-122-531 for DAS application to LAMA-C.

2. **APPARATUS**

All Tests

2.01 Master test control circuit, SD-25800-01.

3. **METHOD**

</table>

CZ. Traffic Sampling Feature by Selected Trunk Group—ETS Not Provided

**Note:** A billed route is a route that requires an MBS series route relay which in turn provides an AMA record on all calls.

TGTS Key Operated—Billed Route—IAO Route

1. At MTF—
   Restore all keys and switches.

2. Momentarily operate RL key.

3. Select ORIG class of test.

4. Select OR class of call with translator indication as required for selected route.

5. Select A through K digits as required to select billed intraoffice route that is provided with trunk group traffic sampling.

6. Select line location having access to selected route.

7. Select class of service and rate treatment having access to route selected.

8. Select route advance as required.

9. Select trunk within trunk group.

10. Operate GPA/GPB key as required for selected group when trunk is in allotted subgroup.

11. Select marker under test.

**VERIFICATION**

All lamps extinguished.
