EMERGENCY LINE CIRCUITS
TESTS
NO. 5 CROSSBAR OFFICES

1. GENERAL

1.01 This section describes a method of testing emergency line circuits in No. 5 crossbar offices.

1.02 This section is reissued to incorporate material from the addendum in its proper location. In this process marginal arrows have been omitted.

1.03 The tests covered are:

A. Manual Originating and Incoming Calls:
   This test checks that the transfer feature from the distant office is operative. It checks that the customer can obtain manual service during periods of emergency and checks the supervisory features. If the trunk associated with the emergency line circuit under test appears on a trunk link frame, a check is made that a call established over this trunk will not be interrupted when the transfer key is operated.

B. Dial Incoming Calls: This test checks that a call can be completed to the dial customer through the link frames when the emergency line circuit is in the transferred condition. It checks that a busy indication is given to a calling customer when the subscriber line associated with the emergency line circuit is busy on a call to or from the switchboard. A check is also made that the trunk used with the emergency line circuit tests busy under the transferred condition.

C. Monitoring by Operator: This test checks that the operator at the distant toll or DSA switchboard can monitor on an established dial call under the transferred condition.

1.04 Tests A and C require action and verification at the distant DSA or toll switchboard. Test B requires action and verification at the master test frame.

1.05 While performing these tests, any customer line on which service cannot be denied should be given emergency service in accordance with local practices.

1.06 The tests described in this section affect the traffic handling capabilities of the office and should be made during periods of light traffic.

1.07 Lettered Steps: A letter a, b, c, etc., added to a step number in Part 3 or 4 of this section, indicates an action which may or may not be required depending on local conditions. The condition under which a lettered step or a series of lettered steps should be made is given in the ACTION column, and all steps governed by the same condition are designated by the same letter within a test. Where a condition does not apply, all steps designated by that letter should be omitted.

2. APPARATUS

All Tests

2.01 No. 322A (make busy) plugs, as required.

2.02 No. 1011G dial hand test set equipped with a No. 2W41A cord assembly consisting of a W2CJ cord, a No. 471A jack, a No. 360A and a 360B tool, and two No. 419A tools (or the replaced No. 1011C dial hand test set).

2.03 Blocking and insulating tools, as required. Use tools and apply, as covered in Section 069-020-801.

Test A

2.04 No. 411A tool (for checking energized relays).
2.05 Two testing cords, No. 893 cord, 3 feet long, equipped with two No. 360A tools (No. 1W13A cord) and two No. 419A tools. (One used at distant office.)

Tests B and C

2.06 Master test control circuit, SD-25800-01.

2.07 Master test frame telephone, key, and lamp circuit, SD-25744-01.

2.08 Master test frame voltmeter test circuit, SD-25792-01.

2.09 Master test frame trunk test circuit, SD-25918-01.

6c  If distant office is equipped with emergency transfer circuit SD-96517-01, arranged for tone transfer —
    At distant office —
    Short contacts 21 make to 21 stationary, 22 make to 22 stationary, 23 make to 23 stationary of T relay.

7  At distant office —
    Block operated associated TR relay.

---

**For Trunk Circuit Associated With Emergency Line Circuit Which Has Trunk Link Appearance**

8  At trunk circuit —
    Observe trunk is idle.
    S1 relay normal.

9  Block operated S1 relay associated with emergency line being tested.

10 At emergency line circuit —
    Block nonoperated all A relays associated with group of emergency lines being tested.

11a If distant office is equipped with emergency transfer circuit SD-55775-01 —
    At distant office —
    Short contacts 7, 8T of TA relay.

12b If distant office is equipped with emergency transfer circuit SD-96517-01, not-arranged for tone transfer —
    At distant office —
    Short contact 11 make to 11 stationary of L relay.

13c If distant office is equipped with emergency transfer circuit SD-96517-01, arranged for tone transfer —
    At distant office —
    Short contacts 11 make to 11 stationary, 12 make to 12 stationary of L relay.

14c Short contacts 1, 2 of TRO key.

---

**For Trunk Circuit Associated With Emergency Line Circuit Which Has Either Line Link or Trunk Link Appearance**

15d If emergency line circuit SD-25701-01 is used —
    At emergency line circuit —
    B or E relay operated.
    A or D relay energized.

16d Operate switch of hand test set to MON position.

17d Connect hand test set to contacts 2T, 2B of T1 relay.
    Ringing, conversation, dial tone not heard.
    Continue test.

*Note:* Should line test busy or an attempt to use the line occur, discontinue test until line is idle.

</tr>
</tbody>
</table>
29j  If trunk has trunk link appearance and emergency line circuit SD-26128-01 or SD-26138-01 is used —
At emergency line circuit —
Short one pair of make contacts on A relay corresponding to emergency line being tested.

30h  If trunk has trunk link appearance and emergency line circuit SD-25701-01 is used —
At trunk circuit —
Remove blocking tool from S1 relay.

31j  If trunk has trunk link appearance and emergency line circuit SD-26128-01 or SD-26138-01 is used —
At trunk circuit —
Remove blocking tool from S1 relay.

32  At emergency line circuit —
Disconnect hand test set.

33d  If emergency line circuit SD-25701-01 is used —
At emergency line circuit —
Insulate 1T, 1B contacts of T1 relay.

34d  Connect hand test set to 1T, 1B fixed contacts of T1 relay.

35e  If emergency line circuit SD-26128-01 is used —
At emergency line circuit —
Insulate 11, 12 make contacts of T relay.

36e  Connect hand test set to 4, 8 make contacts of TB relay.

37f  If emergency line circuit SD-26138-01 is used —
At emergency line circuit —
Insulate 11, 12 make contacts of T relay.

38f  Connect hand test set to 4, 8 make contacts of TB relay.

Note: In Steps 36e, 38f, if customer line is PBX trunk requiring ground removed from tip, apply ground to fixed contact 4 of TB relay.

39  Operate switch on hand test set to TALK position.

40  Operate switch on hand test set several times from TALK to MON position.

Verification

T relay not operated.

T, T1 relays operated.

T relay operated.

At distant office —
Call answered.
Cord supervisory lamp not lighted.

At distant office —
Cord supervisory lamp flashes in response.

53c If distant office is equipped with emergency transfer circuit SD-96517-01, arranged for tone transfer — Remove short from contacts 11 make to 11 stationary, 12 make to 12 stationary of L relay.

54c Remove short from contacts 1, 2 of TRO key.

For Trunk Circuit Associated With Emergency Line Circuit Which Has Either Line Link or Trunk Link Appearance

55g If trunk has line link appearance and emergency line circuit SD-25701-01 is used — At emergency line circuit — Remove short from make contact of D relay.

56h If trunk has trunk link appearance and emergency line circuit SD-25701-01 is used — At emergency line circuit — Remove short from make contact of A relay.

57i If trunk has line link appearance and emergency line circuit SD-26128-01 or SD-26138-01 is used — At emergency line circuit — Remove short from make contact of A relay.

58j If trunk has trunk link appearance and emergency line circuit SD-26128-01 or SD-26138-01 is used — At emergency line circuit — Remove short from make contact of A relay.

59d If emergency line circuit SD-25701-01 is used — Remove insulator from 1T, 1B contacts of T1 relay.

60e If emergency line circuit SD-26128-01 is used — Remove insulator from 11, 12 make contacts of T relay.

61f If emergency line circuit SD-26138-01 is used — Remove insulator from 11, 12 make contacts of T relay.
SECTION 218-225-501

STEP   ACTION                                                                                         VERIFICATION

62     Disconnect hand test set.                                                                      ●

   Note: If customer line was PBX trunk requiring ground removed from tip, remove ground from fixed contact 4 of TB relay.

63     At trunk circuit —                                                                            ●

   Restore circuit to normal operation by removing make-busy plug or returning make-busy switch to normal.

3      At trunk circuit associated with emergency line being tested —                                ●

   Make trunk busy by inserting make-busy plug into make-busy jack, or operate make-busy switch.

4a     If trunk circuit associated with emergency line circuit has line link appearance —            ●

   Observe trunk is idle.

5b     If trunk circuit associated with emergency line circuit has trunk link appearance —           ●

   Observe trunk is idle.

6      Operate switch of hand test set to MON position.                                             ●

7c     If emergency line circuit SD-25701-01 is used —                                                ●

   At emergency line circuit —                                                                      ●

   Connect hand test set to contacts 2T, 2B of T1 relay.

8d     If emergency line circuit SD-26128-01 or SD-26138-01 is used —                                ●

   At emergency line circuit —                                                                      ●

   Connect hand test set to contacts 11, 12 stationary of T relay.

9      At emergency line circuit —                                                                    ●

   Operate switch of hand test set to TALK position.                                                ●

10     Operate switch of hand test set to MON position.                                              ●

11c    If emergency line circuit SD-25701-01 is used —                                                ●

   At emergency line circuit —                                                                      ●

   Block operated T, T1 relays.

12d    If emergency line circuit SD-26128-01 or SD-26138-01 is used —                                ●

   At emergency line circuit —                                                                      ●

   Block operated T relay.

B. Dial Incoming Calls

3      At trunk circuit associated with emergency line being tested —                                ●

   Make trunk busy by inserting make-busy plug into make-busy jack, or operate make-busy switch.

4a     If trunk circuit associated with emergency line circuit has line link appearance —            ●

   Observe trunk is idle.

5b     If trunk circuit associated with emergency line circuit has trunk link appearance —           ●

   Observe trunk is idle.

6      Operate switch of hand test set to MON position.                                             ●

7c     If emergency line circuit SD-25701-01 is used —                                                ●

   At emergency line circuit —                                                                      ●

   Connect hand test set to contacts 2T, 2B of T1 relay.

8d     If emergency line circuit SD-26128-01 or SD-26138-01 is used —                                ●

   At emergency line circuit —                                                                      ●

   Connect hand test set to contacts 11, 12 stationary of T relay.

9      At emergency line circuit —                                                                    ●

   Operate switch of hand test set to TALK position.                                                ●

10     Operate switch of hand test set to MON position.                                              ●

11c    If emergency line circuit SD-25701-01 is used —                                                ●

   At emergency line circuit —                                                                      ●

   Block operated T, T1 relays.

12d    If emergency line circuit SD-26128-01 or SD-26138-01 is used —                                ●

   At emergency line circuit —                                                                      ●

   Block operated T relay.

   CT relay normal.

   S1 relay normal.

   Ringing, conversation, dial tone not heard. Continue test.

   Note: Should line test busy or an attempt to use the line occur, discontinue test until line is idle.

   Ringing, conversation, dial tone not heard. Continue test.

   Note: Should line test busy or an attempt to use the line occur, discontinue test until line is idle.

   Dial tone heard.

   Customer line idle.
STEP  ACTION  VERIFICATION

13  At master test frame —  
    Restore all keys.

14  Operate LT key.

15  Operate IC- key to select incoming class which can complete to line under test.

16e If line number is extra theoretical —  
   Operate E key.

17  Operate MT- key to select a special marker.

18  Operate A-, B-, C-, and D- keys to select customer line number.

19  At master test frame voltmeter test panel —  
    Operate T key.

20  At master test frame —  
    Operate ST key momentarily.  
    LT and MRL lamps light.

21  At emergency line circuit —  
    Operate switch of hand test set to TALK position.  
    Talking circuit established to master test frame.

22  At master test frame —  
    Operate RL key momentarily.  
    All lamps extinguished.

23  At emergency line circuit —  
    Disconnect hand test set.

24  Block operated H1 relay.

25  At master test frame —  
    Restore all keys.

26  Operate INC key.

27  Operate IC- and ITC- keys to select an incoming and trunk class which can complete to line under test.

28  Operate MT- key.

29  Operate A- through E- keys as required to select customer line number.

30  Operate any FG- and FS- keys.

31  Operate PBXH key.

SECTION 218-225-501

STEP | ACTION | VERIFICATION
--- | --- | ---
| | | 

C. Monitoring by Operator

3 At trunk circuit associated with emergency line being tested — Make trunk busy by inserting make-busy plug into make-busy jack, or operate make-busy switch.

4a If trunk circuit associated with emergency line circuit has line link appearance — Observe trunk is idle. CT relay normal.

5b If trunk circuit associated with emergency line circuit has trunk link appearance — Observe trunk is idle. S1 relay normal.

6 Operate switch of hand test set to MON position.

7c If emergency line circuit SD-25701-01 is used — At emergency line circuit — Connect hand test set to contacts 2T, 2B of T1 relay. Ringing, conversation, dial tone not heard. Continue test.

8d If emergency line circuit SD-26128-01 or SD-26138-01 is used — At emergency line circuit — Connect hand test set to contacts 11, 12 stationary of T relay. Ringing, conversation, dial tone not heard. Continue test.

Note: Should line test busy or an attempt to use the line occur, discontinue test until line is idle.

9c If emergency line circuit SD-25701-01 is used — Disconnect hand test set from T1 relay.

10c Block operated T, T1 relays.

11c Insulate contacts 1T, 1B of T1 relay.

12d If emergency line circuit SD-26128-01 or SD-26138-01 is used — Disconnect hand test set from T relay.

13d Block operated T relay.

14d Insulate contacts 11, 12 make of T relay.
15e If information or intercepting trunk associated with emergency line circuit has line link appearance —
At master test frame —
Operate A-, B-, C-, D- keys to select customer line number.

16e Operate IC- key to select type of office.

17e Operate LT key to select class of test.

18e Operate MT- key to select special marker.

19e At master test frame voltmeter test circuit panel —
Operate T key to connect telephone to master test circuit.

20 Operate ST key momentarily.

21a If trunk circuit associated with emergency line circuit has line link appearance —
At distant office —
Block operated associated TR relay.

22 At distant office switchboard —
Connect calling cord to jack of trunk being tested.

23 Operate talking key.

24 Disconnect calling cord.

25a If trunk circuit associated with emergency line circuit has line link appearance —
At distant office —
Remove blocking tool from TR relay.

26 At master test frame —
Operate RL key momentarily.

27c If emergency line circuit SD-25701-01 is used —
At emergency line circuit —
Remove blocking tools from T, T1 relays.

Talking circuit established from master test frame to distant switchboard.
