TRAFFIC REGISTERS—PART 11
TESTS USING MASTER TEST FRAME
NO. 5 CROSSBAR OFFICES

1. GENERAL

1.001 This addendum supplements Section 218-232-512 Issue 2. The attached pages must be inserted in the section in accordance with filing instructions above.

1.002 This addendum is issued for the following reasons:

(a) To revise title

(b) To add new paragraph 1.01 and renumber paragraphs 1.01 through 1.08 as 1.02 through 1.09.

This addendum affects Equipment Test Lists.

Attached:

Page 1 dated November 1972, revised
Page 2 dated November 1972, revised
1. GENERAL

1.01 This section is Part 11 of a series of sections that describe methods for testing traffic registers.

1.02 This section is reissued for the following reasons:

(a) To include the traffic register lead designations in each test

(b) To delete the reference to other BSP sections in each test and to provide a complete method of testing within this section

(c) To make minor changes as required.

Since this reissue covers a general revision, arrows ordinarily used to indicate changes have been omitted.

1.03 The tests covered are:

A. Peg Count Register for Test Calls Using Line Link Frames (PCL) and Test Calls Using Markers (PCM): This test checks that the peg count register operates when a marker uses any line link frame (PCL) on a test call. It also checks that the peg count register operates when a marker (PCM) is used on a test call.

B. Peg Count Register for Transverter Test Calls (PCA): This test checks that the peg count register operates when a transverter is seized for a test call.

C. Peg Count Register for Originating Register Test Calls (PCO): This test checks that the peg count register operates when the automatic monitor handles an originating register test call.

D. Peg Count Register for Incoming Register Test Calls (PCI): This test checks that the peg count register operates when the automatic monitor handles a test call of an incoming register of the type associated with the peg count register.

E. Peg Count Register for Outgoing Sender Test Calls (PCS): This test checks that the peg count register operates when the automatic monitor handles a test call of an outgoing sender of the type associated with the peg count register.

F. Peg Count Register for Master Test Frame Total Test Calls (PCT): This test checks that the peg count register operates when the master test frame (MTF) is used for a test call.

G. Peg Count Register for Line Verification (PCT): This test checks that the peg count register operates when a marker is used to establish required connections for verifying number group and line link frame cross-connections or when a transverter is used to establish required connections for verifying translator cross-connections.

1.04 Table A indicates the locations required for action and verification of each test.

1.05 A Test Chart is provided which shows information required for each test. Spaces are provided for listing specific priming information depending on local conditions. Entries should be made in this chart from local records in accordance with instructions provided in Part 5, Preparation of Test Chart.
1.06 Lettered Steps: A letter a, b, c, etc., added to a step number in Parts 3 and 4 of this section indicates an action which may or may not be required depending on local conditions. The condition under which a lettered step or a series of lettered steps should be made is given in the ACTION column, and all steps governed by the same condition are designated by the same letter within a test. Where a condition does not apply, all steps designated by that letter should be omitted.

1.07 Local instructions should be followed for recording and reporting register operations caused by performing these tests.

1.08 The manner of selecting some circuits and test conditions at the MTF and its associated circuits varies depending on the apparatus options furnished with these circuits. Therefore, where variable means of selection are provided, precise instructions for selection of circuits and test conditions are not given. Precise instructions for the use of these variable means are given in Section 218-106-301.

1.09 The location statement, At MTF—, is used to refer to all apparatus located on the four basic bays of the MTF.

2. APPARATUS

2.01 The apparatus required for each test is listed in Table B. The details of each item are covered in paragraph indicated by the number in parentheses.

2.02 Two W2W cords, 10 feet long, each equipped with a 310 plug, two 360B tools (2W17C cords), two KS-6278 connecting clips, and two 108 cord tips (required when a portable test lamp is used).

2.03 38B lamp socket, equipped with a 2Y lamp (required when a portable test lamp is used).

2.04 Two head telephone sets are required when a portable test lamp is not used.

2.05 Two 26 cords are required in offices where it is necessary to patch the traffic register to the circuit under test and to patch the traffic register to a battery supply.
TRAFFIC REGISTERS FOR TEST CALL PEG COUNT
TESTS USING MASTER TEST FRAME
NO. 5 CROSSBAR OFFICES

1. GENERAL

1.01 This section is reissued for the following reasons:

(a) To include the traffic register lead designations in each test

(b) To delete the reference to other BSP sections in each test and to provide a complete method of testing within this section

(c) To make minor changes as required.

Since this reissue covers a general revision, arrows ordinarily used to indicate changes have been omitted.

1.02 The tests covered are:

A. Peg Count Register for Test Calls Using Line Link Frames (PCL) and Test Calls Using Markers (PCM):
This test checks that the peg count register operates when a marker uses any line link frame (PCL) on a test call. It also checks that the peg count register operates when a marker (PCM) is used on a test call.

B. Peg Count Register for Transverter Test Calls (PCA):
This test checks that the peg count register operates when a transverter is seized for a test call.

C. Peg Count Register for Originating Register Test Calls (PCO):
This test checks that the peg count register operates when the automatic monitor handles an originating register test call.

D. Peg Count Register for Incoming Register Test Calls (PCI):
This test checks that the peg count register operates when the automatic monitor handles a test call of an incoming register of the type associated with the peg count register.

E. Peg Count Register for Outgoing Sender Test Calls (PCS):
This test checks that the peg count register operates when the automatic monitor handles a test call of an outgoing sender of the type associated with the peg count register.

F. Peg Count Register for Master Test Frame Total Test Calls (PCT):
This test checks that the peg count register operates when the master test frame (MTF) is used for a test call.

G. Peg Count Register for Line Verification (PCT):
This test checks that the peg count register operates when a marker is used to establish required connections for verifying number group and line link frame cross-connections or when a transverter is used to establish required connections for verifying translator cross-connections.

1.03 Table A indicates the locations required for action and verification of each test.

1.04 A Test Chart is provided which shows information required for each test. Spaces are provided for listing specific priming information depending on local conditions. Entries should be made in this chart from local records in accordance with instructions provided in Part 5, Preparation of Test Chart.

2.02 Two W2W cords, 10 feet long, each equipped with a 310 plug, two 860B tools (2W17C cords), two KS-6278 connecting clips, and two 108 cord tips (required when a portable test lamp is used).

2.03 38B lamp socket, equipped with a 2Y lamp (required when a portable test lamp is used).

2.04 Two head telephone sets are required when a portable test lamp is not used.

2.05 Two 26 cords are required in offices where it is necessary to patch the traffic register to the circuit under test and to patch the traffic register to a battery supply.
3. PREPARATION

## ACTION

### STEP

#### All Tests

1a If traffic registers are arranged for patching—
   At traffic register cabinet—
   Insert cord tip of 26 patching cord into P-jack for circuit associated with register to be tested.

2a Insert cord tip on other end of 26 patching cord into black jack associated with register to be tested. (Black jack is located on mounting plate with register.)

3a Insert cord tip of 26 cord into red jack on mounting plate with register to be tested.

4a Insert cord tip on other end of 26 cord into any S-jack located at bottom of jack field.

5b If traffic registers are arranged for patching and if battery supply for register to be tested is controlled by C-toggle switch—
   At traffic register cabinet—
   Operate C-toggle switch to ON.

6c If traffic registers are not arranged for patching—
   Determine from local office records functional designation of peg count BAT key associated with register to be tested.

7c At traffic register circuit frame—
   Operate BAT key associated with register to be tested.

8d If tests are to be performed without portable lamp—
   Establish talking circuit between frames where test is to be performed and where observations are to be made.

9e If tests are to be performed with portable lamp—
   At frame where action is to be taken—
   Insert plug of 2W17C cord, equipped with two KS-6278 connecting clips, into SP jack of miscellaneous circuit.

### VERIFICATION

*Note: Refer to 1.07 and 1.08.*

| 32   | Restore C-switch or BAT key. |

**D. Peg Count Register for Incoming Register Test Calls (PCI)**

21. Insert make-busy plug into IRMB- jack of incoming register associated with traffic register under test.

22. Select incoming register made busy.

23. Operate keys and set switches in accordance with Test Chart.

*Note:* Allow 1 minute for tubes to heat.

24. Select IR class of test.

25. Select an equipped incoming class of call and associated translator indication.

26h. If incoming register is arranged for MF pulsing—  
Operate MF key.

27i. If incoming register is arranged for 4-wire MF pulsing—  
Operate 4W or 4WM key.

28. Momentarily operate ST key.

OK lamp lighted.  
At traffic register cabinet—  
Register scored once.

29. At MTF—  
Momentarily operate RL key.  
All lamps extinguished.

30. Remove make-busy plug from IRMB- jack.

31. Restore all keys and switches not required in next test.
SECTION 218-232-512

STEP  ACTION  VERIFICATION
32  Remove all patching cords and/or head telephone sets.  
33  Restore C- switch or BAT key.  

E. Peg Count Register for Outgoing Sender Test Calls (PCS)
21  Select sender.  
22  Select marker.  
23  Select route advance 0.  
24  Select SDR class of test.  
25h  If sender is arranged for 4-wire MF operation—
Operate 4W or 4WM key.  
26i  If sender is arranged for MF operation—
Operate MF key.  
27  Release (push in) CTR- key.  
28  Operate keys and set switches in accordance with Test Chart.

Note: Allow 1 minute for tubes to heat.
29  Momentarily operate ST key.  

OK lamp lighted.  
At traffic register cabinet—
Register scored once.  
30  At MTF—
Momentarily operate RL key.  

All lamps extinguished.  
31  Restore all keys and switches not required in next test.  
32  Operate CTR- key.  
33  Remove all patching cords and/or head telephone sets.  
34  Restore C- switch or BAT key.  

F. Peg Count Register for Master Test Frame Total Test Calls (PCT)
21  Select marker.  

Page 8
STEP ACTION

22 Operate keys and set switches in accordance with Test Chart.

23 Select DT class of test.

24 Momentarily operate ST key.

25 At MTF—
   Momentarily operate RL key.

26 Restore all keys and switches.

27 Remove all patching cords and/or head telephone sets.

28 Restore C-switch or BAT key.

G. Peg Count Register for Line Verification (PCT)

19 At line verification test frame—
   Restore all keys and switches.

20 Momentarily operate RL key.

21 Operate MLV0 key.

22 Operate keys and set switches in accordance with Test Chart.

23 Momentarily operate ST key.

24 At line verification test frame—
   Restore MLV0 key.

25 Momentarily operate RL key.

26 Repeat Steps 21 through 25 using MLV1 key.

27 Operate TLV0 key.

28 Momentarily operate ST key.

29 At line verification test frame—
   Restore TLV0 key.

30 Momentarily operate RL key.

31 Repeat Steps 27 through 30, using TLV1 key.

VERIFICATION

At traffic register cabinet—
Register scored once.

All lamps extinguished.

All lamps extinguished.

At traffic register cabinet—
Register scored once.

All lamps extinguished.

At traffic register cabinet—
Register scored once.

All lamps extinguished.
SECTION 218-232-512

STEP      ACTION                  VERIFICATION

32        Restore all keys and switches.
33        Remove all patching cords and/or head telephone sets.
34        Restore C-switch or BAT key.

5. PREPARATION OF TEST CHART

5.01 The Test Chart is used as a particular number chart and provides the priming information required for each test. Information obtained from local office records should be used to fill in the Test Chart in the following manner.

Tests A Through F

(a) Any desired class of service except manual or coin may be used.

(b) In the DIGITS-CODE(S) AND NUMBER column, record a working office code and numericals as required.

Test B

(a) In MTF MISCELLANEOUS KEYS AND/OR SWITCHES column, record code pattern for route selected and message billing index.

Test G

(a) Record a line location, class of service, and directory number that will provide a match.

(b) In MTF MISCELLANEOUS KEYS AND/OR SWITCHES column, record ringing combination of selected directory number.
