INCOMING REGISTER PRETRANSLATOR SD-27969-01

TESTS USING OFFICE TEST FRAME

TEST CIRCUIT SD-27633-01 (J23260)

NO. 5 CROSSBAR OFFICES

1. GENERAL

1.01 This section describes a method of testing incoming register pretranslators SD-27969-01 used to determine the number of digits to be received by dial pulse incoming registers on incoming toll, tandem, or CAMA class calls.

1.02 The reasons for reissuing this section are listed as follows. Revision arrows are used to emphasize the more significant changes. This reissue does not affect Equipment Test Lists.

(a) To revise all tests to permit the selection of pretranslators made busy at the office test frame.

(b) To make minor changes as required.

1.03 The tests covered are:

A. Translation Feature: This test checks the operation of the pretranslator digit registers and translators for all codes.

B. Open Receiver Lead Check Feature: This test checks that the pretranslator recognizes an open receiving (A_, B_, or C_) lead from the incoming register.

C. Open Release Lead Check Feature: This test checks that the pretranslator recognizes an open release (PRL) lead to the incoming register.

D. Open Transmitting Lead Check Feature: This test checks that the pretranslator recognizes open transmitting leads (CM3, CMA, and CMB) to the incoming register.

E. No Locking Ground on Transmitting Lead Check Feature: This test checks that the pretranslator recognizes the failure to return locking ground on the transmitting leads from the incoming register.

F. Open Trouble Release Lead Check Feature: This test checks that the pretranslator recognizes an open trouble release (TR and TR1) lead in the pretranslator or incoming register.

G. Transfer Start Feature: This test checks that the pretranslator recognizes a transfer start lead signal from the pretranslator connector.

H. Display Lost Feature: This test checks that the associated DL lamp is lighted when the trouble indicator is busy and the pretranslator attempts to make a trouble registration.

I. Work Timer and Trouble Recorder Timer Features: The following features are checked: (1) If the pretranslator is held longer than a specified time, the work timer will time out and cause a trouble indication display. (2) If, after the work timer has timed...
out, the trouble indication is not completed within a specified time, the trouble timer will time out.

**J. Trouble Detection Feature for False Ground or Crosses:** This test checks that all cross-detection relays function properly under trouble conditions.

**K. Make-Busy Feature:** This test checks that the MB relay is operated in all pretranslator make-busy conditions.

**1.04** All tests covered in this section should be made during periods of light traffic.

**1.05** The tests requiring action and/or verification at more than one location are listed in Table A.

**1.06** From office records, for each of the transmitting leads listed in Table D, record an associated code which, when translated, will cause that transmitting lead(s) to be grounded.

**1.07** From office records, for each of the incompleted codes listed in Table E, record a code and also the designation of transmitting lead(s) grounded.

**1.08** When performing Tests A through H the traffic register associated with the incoming register PD lead will score on each test call.

**1.09** Lettered Steps: A letter a, b, c, etc, added to a step number in Part 3 or 4 of this section indicates an action which may or may not be required depending on local conditions. The condition under which a lettered step or a series of lettered steps should be made is given in the ACTION column, and all steps governed by the same condition are designated by the same letter within a test. Where a condition does not apply, all steps designated by that letter should be omitted.

**2. APPARATUS**

**2.01** The apparatus required for each test is listed in Table B. The details of each item are covered in the paragraph indicated by the number in parentheses.

**2.02** Office test frame, SD-27633-01 (J23260)

**2.03** Trouble indicator and connector circuit, SD-27634-01.

**2.04** Blocking and insulating tools. Use tools and apply as covered in Section 069-020-801.

**2.05** Patching cord, P34 cord, 8 feet long, equipped with two 310 plugs (3P6E cord).

**2.06** Patching cord, W3M cord, 15 feet long, equipped with one 310 plug, three 360 tools

(3W4B cord), and one KS-6278 connecting clip (to connect SP jack to unit terminal strip).

2.07 Testing cord, 893 cord, 6 feet long, equipped with two 360A tools (1W13B cord), one 419A (test connector) tool and one KS-6278 connecting clip (for making test connections to terminal strip and relay contact springs).

2.08 Testing cord, 893 cord, 6 feet long, equipped with two 360A tools (1W13B cord), one KS-6278 connecting clip, and one 411A (test pick) tool (for making test connections to fuse alarm bar).

### 3. PREPARATION

Tests A, D, E, F

Refer to paragraphs 1.04 through 1.09.

### TESTS A THROUGH H

#### ACTION

1. At OTF—
   - Restore all keys and switches.

2. Set RSG switch to select incoming register group having access to incoming register pretranslator to be tested.

3. Set RSS switch to select incoming register to be used for test.

4. From office records, select a tandem or intertoll trunk having access to selected incoming register.

#### VERIFICATION

All lamps extinguished.
SECTION 218-431-501

STEP ACTION VERIFICATION

36 At distant office—
Have selected trunk made busy.

5 At OTF—
Operate ITT, 3D, MCB, CB keys.

6 Operate MKR_ key to select a completing marker.

7 Set PS switch to 15pps, 65 percent break position.

8 Set L_L switch to position 0.

9a If trunk selected has incoming reverse battery supervision—
At relay rack frame—
Patch ITT jack to T jack or trunk.

10a At OTF—
Operate ITT1 key.

11b If trunk selected has incoming CX or SX supervision—
At relay rack frame—
Patch T1, T2 jacks to T1, T2 jacks of trunk.

12b At OTF—
Operate ITT2 key.

13c If trunk selected is bylink—
Operate BL key.

14c Patch BL jack to SP jack.

15c At relay rack frame—
Patch to SP jack and connect sleeve to terminal 42 on trunk unit terminal strip.

16d If trunk selected does not require a start dial signal—
At OTF—
Operate ONHK key.

17e If trunk selected has A relay ground shunt—
Operate GS key.

18f If trunk selected has short conductor loop—
Operate SLP key.

19g If trunk selected has pad control—
Operate TP0 key.
Tests B Through G

20 At TIC—
   Operate TIR AR key to release alarms after a timed interval.

4. METHOD

A. Translation Feature

20 •At jack, lamp, and key circuit—
   Insert make-busy plug into PRTMB_ jack associated with pretranslator under test.

21 At OTF—
   Set •A, B, C• DIAL switches for first code listed in Table D.

22 •At incoming register frame—
   Insert plug of 32A test set into RC jack.

23 Momentarily operate white (ST) button on 32A test set.

24 Momentarily operate red (RL) button on 32A test set.

25 Repeat Steps 21 through 24 for each code remaining in Table D, then codes in Table E.

26 Remove plug of 32A test set from RC jack.

27 At relay rack frame—
   Remove patch cord(s) used for test.

28c If trunk selected is bylink—
   At OTF—
   Remove patch cord used for test.

29 •At distant office—
   Have trunk used in test restored to service.

30 •At jack, lamp, and key circuit—
   Remove make-busy plug from PRTMB_ jack associated with pretranslator under test.

31 At OTF—
   Restore all keys and switches.

Verification

PRT_ lamp lighted.

Observe that PST, PRL relays operated, and relays designated the same as transmitting leads(s) grounded operated.

Incoming register released.

PRT_ lamp extinguished.
### B. Open Receiving Lead Check Feature

C. Open Release Lead Check Feature

21 Momentarily operate RLS key.

22 •At jack, lamp, and key circuit—
   Insert make-busy plug into PRTMB_ jack
   associated with pretranslator under test.

23 At OTF—
   Set •A, B, C• DIAL switches for any code.

24 At pretranslator under test—
   Insulate 8M of ATC relay.
   
   Caution: When insulating movable springs of wire-spring-type relays, use care not to dislodge the movable spring from the groove of the comb.

25 At OTF—
   Operate ST key.

26 Momentarily operate RLS key.

27 At OTF—
   Restore ST key.

28 At pretranslator under test—
   Remove insulator from 8M of ATC relay.

29 At relay rack frame—
   Remove patch cord(s) used for test.

30c If trunk selected is bylink—
   At OTF—
   Remove patch cord used for test.

31 •At distant office—
   Have trunk used in test restored to service.

32 At jack, lamp, and key circuit—
   Remove make-busy plug from PRTMB_ jack
   associated with pretranslator under test.

33 At OTF—
   Restore all keys and switches.

34 At TIC—
   Restore TIR AR key.

VERIFICATION

All lamps extinguished.

PRT_ lamp lighted.

PRT_ lamp not lighted.

Display registered.

PRT_, CMC, CM_, T0K lamps lighted.

Display released.

All lamps extinguished.

PRT_ lamp extinguished.

STEP ACTION

40 At OTF—
Restore all keys and switches.

41 At TIC—
Restore TIR AR key.

F. Open Trouble Release Lead Check Feature

21 Momentarily operate RLS key.

22 At jack, lamp, and key circuit—
Insert make-busy plug into PRTMB jack
associated with pretranslator under test.

23 At pretranslator under test—
Insulate 4B of FA1 relay.

Caution: When insulating movable springs of wire-spring-type relays, use care not to dislodge the movable spring from the groove of the comb.

24 Block nonoperated LKT relay.

25 At OTF—
Set •A, B, C• DIAL switches for code which,
when translated, grounds CM3, CMA, or CMB
transmitting lead. (Refer to Table D or E.)

26 At OTF—
Operate ST key.

27 At TIC—
Momentarily operate RLS key.

28 At OTF—
Restore ST key.

29 At pretranslator under test—
Remove insulator from 4B of FA1 relay and
blocking tool from LKT relay.

30 At relay rack frame—
Remove patch cord(s) used for test.

31c If trunk selected is bylink—
At OTF—
Remove patch cord used for test.

VERIFICATION

All lamps extinguished.

PRT_ lamp lighted.

Display registered.
CM_, CMC, PRT_ lamps lighted.
PRL lamp not lighted.

Display released.

All lamps extinguished.

### I. Work Timer and Trouble Recorder Timer Features

1. At TIC—Insert make-busy plug into TIC_MB PRT_jack associated with pretranslator under test.

2. **At jack, lamp, and key circuit—**
   - Insert make-busy plug into PRTMB_jack associated with pretranslator under test.
   - PRT lamp lighted.

3. At pretranslator under test—Block nonoperated TR relay.

4. Manually operate TM relay; **start timing.**
   - In 230 to 290 milliseconds—WT relay operated.

5. Release TM relay.

6. Remove blocking tool from TR relay.

7. Block nonoperated TRST relay.

8. Block operated TR relay; **start timing.**
   - Minor alarm sounds.
   - In 2.0 to 2.5 seconds—Major alarm sounds.
   - TRT lamp lighted.
   - TRR lamp lighted.

9. At pretranslator under test—Remove blocking tool from TR, TRST relays.

10. Momentarily operate AR key.
    - Major alarm silenced.
    - TRT lamp extinguished.

11. At TIC—
    - Momentarily operate TIR_AR key.
    - Minor alarm silenced.
    - At jack, lamp, and key circuit—TRR lamp extinguished.

12. Remove make-busy plug from TIC_MB PRT_jack.

13. **At jack, lamp, and key circuit—**
    - Remove make-busy plug from PRTMB_jack associated with pretranslator under test.
    - PRT lamp extinguished.
J. Trouble Detection Feature for False Ground or Crosses

1. At jack, lamp, and key circuit—
   Insert make-busy plug into PRTMB_ jack associated with pretranslator under test.

2. At TIC—
   Operate TIR_AR key to release alarms after a timed interval.

3. Momentarily operate RLS key.

4. At pretranslator under test—
   For first lead listed in Table C, momentarily ground the indicated relay contact.

5. Momentarily operate RLS key.

6. Repeat Steps 4 and 5 for each lead listed in Table C.

7. At jack, lamp, and key circuit—
   Remove make-busy plug from PRTMB_ jack associated with pretranslator under test.

8. At TIC—
   Restore TIR_AR key.

SECTION 218-431-501

K. Make-Busy Feature

1. At jack, lamp, and key circuit—
   Insert make-busy plug into PRTMB_ jack associated with pretranslator under test.
   - PRT_ lamp lighted.
   - At pretranslator under test—
     MB relay operated.

2. Momentarily connect battery to fuse alarm bar associated with pretranslator under test.
   - FA1 relay operated.

3. At jack, lamp, and key circuit—
   Remove make-busy plug from PRTMB_ jack associated with pretranslator under test.
   - PRT_ lamp extinguished.
   - At pretranslator under test—
     FA1, MB relays remain operated.

   - Caution: When insulating movable springs of wire-spring-type relays, use care not to dislodge the movable spring from the groove of the comb.

5. Block operated TR relay.

6. Momentarily operate AR key.
   - FA1 relay released.
   - MB relay remains operated.

7. Block operated TRL relay.

8. Remove blocking tool then insulators from 3M, 5M, and 11M of TR relay.
   - MB relay remains operated.

10. Block operated TM relay.

11. Remove blocking tool from TRL relay.
    - MB relay remains operated.

12. Block operated the first pretranslator connector PF_ relay associated with pretranslator under test.

13. Remove blocking tool then insulator from 11M of TM relay.
    - MB relay remains operated.

14. Block operated the second pretranslator connector PF_ relay associated with pretranslator under test.

15. Remove blocking tool from first PF_ relay
    - MB relay remains operated.

16. Remove blocking tool from second PF_ relay.
    - MB relay released.

VERIFICATION

PRT_ lamp lighted.
At pretranslator under test—
MB relay operated.

FA1 relay operated.

PRT_ lamp extinguished.
At pretranslator under test—
FA1, MB relays remain operated.

FA1 relay released.
MB relay remains operated.

MB relay remains operated.

MB relay remains operated.

MB relay remains operated.

MB relay remains operated.

MB relay released.
