## IETHOD OF OPERATION

 SIGNAL CIRCUITBuzzer - Machine Switching System - Revair Clerk's Desk \#1

## GENERAL DESCRIPTION

1. This circuit is used to sumply interrupted battery to the lamps of incoming trunk circuits at a repair clerk's desk, causing the lamps to flash incoming calls. The circuit may be arranged to grovide an audible signal. Dupilicate flashing equipment is provided in case of emergency.
2. The circuit is associated with a key which is used to transfer calls for the repair clerk's desk to the intercepting operator"s position.

## DETAILED DESCRIPTION

## OPERATION

## INCOMING CALL ANSWERED AT THE REPAIR CLERK'S DESK

5. When the trunk circuit to the repair clerk's desk is seized by a district or office selector, a circuit is closed from battery through the winding of a relay in the trunk circuit, the windings of the repeating coll and the winding of a relay in the district selector, to ground through the winding of the Blo relay which operates. The Blo relay operated closes a circuit from battery through a contact of the transm fer key (the wiring of which is not shown on this drawing), throuth the winding of the A or B relay, depending uron the position of the key shown in figure 3 to ground through the $B B$ interrupter. The dupilcate relays provide aeainst trouble daused by battery suppiy passing throunh relay contacts. The A or $B$ relay operates intermittenty supplying battery to the trunk lampa at the repair clerk's desk, causing them to flawh The A or B relay operated, iso supplies battery under control of the key shown in plgure 4 to the 4 an buzzer, if provided.
6. When the coll is answered, the Blo relay releates, opening the circuit through the winding of the A or B relay, which releases, extinguishing the trunk lamps and gllencing the buzzer.

## INCOMING CALL TRANSFERRED TO INTERCEPTING OPERATOR'S POSITION.

5. If the associated transfer key is operated, the circuit through the winding of the A or B relay is not closed when the blo relay operates and no sienals are given at the repair clerk's desk, An answering jack and a lamp (the latter under control of the transfer key) are provided at the intercepting operator's position. When the call is answered, the blo relay releases, restorine the circuit to normal.

## CIRCUI盟 REQUIREMENTS

|  | OPERATE | NON-OPERATE | RELEASE |
| :---: | :---: | :---: | :---: |
| B10 | rest . 027 amp. <br> Readj. . 025 ahp. |  | $\begin{aligned} & \text { Test .002 amp. } \\ & \text { Readj. . } 004 \mathrm{amp} \end{aligned}$ |
