CHANGES

B. CHANGES IN APPARATUS

B.1 Added:

3 P2E Cord

D. DESCRIPTION OF CIRCUIT CHANGES

D.1 The P3F cord is added to the drawing for use in crossbar offices. The assembly number for the P3E cord and designation "For Panel Office" is added.

D.2 Prior to issue 4-D the connecting information at the cords was as follows: "Patch to permanent signal trunk or coin control circuit jacks".

All other headings under "CHANGES", no change.

1. PURPOSE OF CIRCUIT

1.1 This circuit is used at the sender make busy frame to make connections from the test trunk at the local test desk to permanent signal holding trunk and coin control or supervisory jacks at the sender make busy frame.

2. WORKING LIMITS

2.1 (D) Relay

2.11 Maximum external circuit loop with ± 15 volts earth potential, 800 ohms.

2.12 Maximum external circuit loop without earth potential 1290 ohms.

3. FUNCTIONS

3.1 To close the sleeve lead towards the test desk when the cord is connected at the sender make busy frame.

3.2 To give a visible and audible indication at the sender make busy frame when the disconnect key in the test trunk at the test desk is operated.
4. CONNECTING CIRCUITS

4.1 Permanent Signal Holding Trunk Circuit.
4.2 Coin Control or Supervisory Circuit.
4.3 Sender Make Busy Frame, Auxiliary Signal Circuit.
4.4 Test Trunk Ringing Circuit, Local Test Desk No. 14.
4.5 Miscellaneous Circuit for Sender Make Busy Frame.

DESCRIPTION OF OPERATION

5. CIRCUIT OPERATION

5.1 Cord Put Up

When the test desk desires the test trunk to be connected for test, instruction is given over a talking trunk. The attendant at the sender make busy frame can originate a call by connecting the test trunk to a jack associated with a permanent signal holding trunk circuit or a jack associated with a coin control or supervisory circuit to be tested, by means of a patching cord. Relay (S) operates over the sleeve circuit to ground thru the winding of a relay in the associated circuit. Relay (S) operated, closes a circuit through the winding of relay (D) to lead "S" signaling the test desk. Relay (D) is marginal to this circuit and will not operate. The tip and ring of the cord are directly connected to the test trunk circuit in the test desk over which the necessary tests are made.

5.2 Disconnection

When the disconnect key in the test trunk circuit at the test desk is operated, relay (D) operates which in turn causes the operation of relay (D1). Relay (D1) operating lights the (TD) lamp and causes the auxiliary signal to function at the sender make busy frame as a disconnect signal. When the cord is taken down at the sender make busy frame, relay (S) releases, releasing relay (D). Relay (D) releasing causes relay (D1) to release. Relay (D1) released, extinguishes the (TD) lamp and silences the auxiliary signal.
B. CHANGES IN APPARATUS

B.1 Added
3 Pl2E Cord

D. DESCRIPTION OF CIRCUIT CHANGES

D.1 The P3F cord is added to the drawing for use in crossbar offices. The assembly number for the P3E cord and designation "For Panel Office" is added.

D.2 Prior to issue 4-D the connecting information at the cords was as follows: "Patch to permanent signal trunk or coin control circuit jacks".

All other headings under "CHANGES", no change.

1. PURPOSE OF CIRCUIT

1.1 This circuit is used at the sender make busy frame to make connections from the test trunk at the local test desk to permanent signal holding trunk and coin control or supervisory jacks at the sender make busy frame.

2. WORKING LIMITS

2.1 (D) Relay
2.11 Maximum external circuit loop with ± 15 volts earth potential, 800 ohms.
2.12 Maximum external circuit loop without earth potential 1290 ohms.

3. FUNCTIONS

3.1 To close the sleeve lead towards the test desk when the cord is connected at the sender make busy frame.

3.2 To give a visible and audible indication at the sender make busy frame when the disconnect key in the test trunk at the test desk is operated.
4. CONNECTING CIRCUITS

4.1 Permanent Signal Holding Trunk Circuit.
4.2 Coin Control or Supervisory Circuit.
4.3 Sender Make Busy Frame, Auxiliary Signal Circuit.
4.4 Test Trunk Ringing Circuit, Local Test Desk No. 14.
4.5 Miscellaneous Circuit for Sender Make Busy Frame.

DESCRIPTION OF OPERATION

5. CIRCUIT OPERATION

5.1 Cord Put Up

When the test desk desires the test trunk to be connected for test, instruction is given over a talking trunk. The attendant at the sender make busy frame can originate a call by connecting the test trunk to a jack associated with a permanent signal holding trunk circuit or a jack associated with a coin control or supervisory circuit to be tested, by means of a patching cord. Relay (S) operates over the sleeve circuit to ground thru the winding of a relay in the associated circuit. Relay (S) operated, closes a circuit through the winding of relay (D) to lead "S" signaling the test desk. Relay (D) is marginal to this circuit and will not operate. The tip and ring of the cord are directly connected to the test trunk circuit in the test desk over which the necessary tests are made.

5.2 Disconnection

When the disconnect key in the test trunk circuit at the test desk is operated, relay (D) operates which in turn causes the operation of relay (D1). Relay (D1) operating lights the (TD) lamp and causes the auxiliary signal to function at the sender make busy frame as a disconnect signal. When the cord is taken down at the sender make busy frame, relay (S) releases, releasing relay (D). Relay (D) releasing causes relay (D1) to release. Relay (D1) released, extinguishes the (TD) lamp and silences the auxiliary signal.
