For Training Purposes Only

Printed in U.S.A.

January 1953

PREFACE

This provisional training material represents a preliminary step toward improving the "learning" literature for the No. 355 community dial office.

This manual contains a series of typical circuit diagrams. These are drawn in the simplified style which is used in teaching the complex 'Common Control' switching systems now in current use. This method makes use of sequence charts and operational sketches, and this volume contains a chart and sketch for each of the typical circuits.

Since the drawings are intended to be used in the study of the 355 CDO in general, and do not necessarily conform to any particular office, it may be necessary to consider the regular Schematic Drawings (SD's) and Circuit Descriptions (CD's) when preparing learners to work in a specific office. Also, those employees who must make mechanical or electrical adjustments of the apparatus should have actual practice on typical switches. In this connection a review of the Bell System training film "The Step-by-Step Switch" will be found helpful.

Students should be cautioned that the particular circuits contained in this manual are intended to be used as training aids, and are not necessarily applicable for maintenance.
