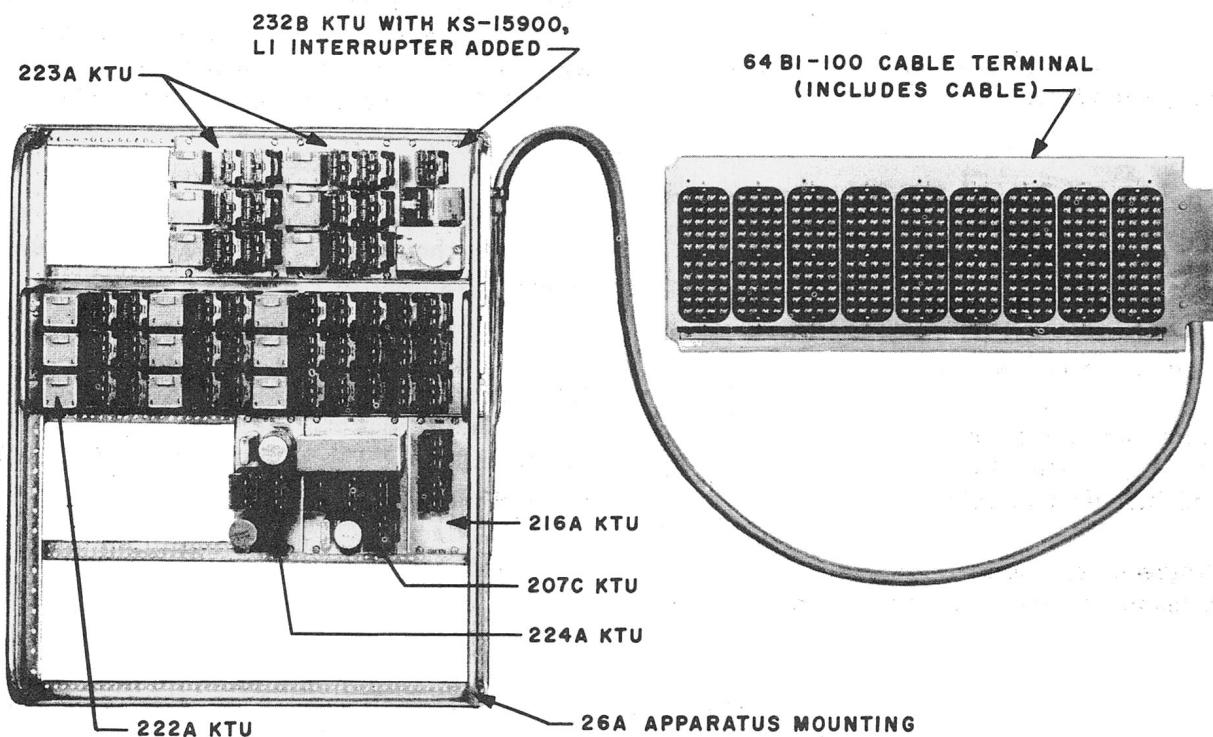

Fig. 1 — 200H15DC Key Telephone Unit

**1.00 INTRODUCTION**

**1.01** This section covers the identification, connections, and maintenance for the 200H-type key telephone units.

**1.02** This section is reissued to:

- Add information on the 232B KTU.
- Reverse *RS* and *RG* leads in Table A to conform with the way the package is factory-wired.
- Make corrections and changes in the connection and schematic drawings.

**1.03** The 232A KTU is rated Manufacture Discontinued. As manufacturing facilities permit, new 200H-type key telephone units will be equipped with 232B units, although the package code will not be changed to reflect this fact.

**1.04** Due to extensive changes, marginal arrows have been omitted.

**2.00 IDENTIFICATION**

**2.01** The 200H-type key telephone units are packaged units of the 6A, 2-talking link key telephone system. These packages provide for:

- Intercommunication facilities for a maximum of 18 codes.
- A primary and secondary talking link which enables a system to carry two simultaneous and independent conversations.
- Single-spurt audible signaling over *T* and *R* leads or over a separate pair.
- Flashing lamps on incoming calls.
- Busy lamps on stations using the secondary link, and busy lamps on all stations when the primary link is in use.

• Dial-selective signaling and means for signaling by keys.

• Camp-on.

• A busy tone to the station originating camp-on and to any other stations which may try to originate a call after the system has been camped-on.

• Automatic cutoff.

• Intercommunication for stations associated with separate installations or combinations of the following: key and telephone circuit; 1A or 1A1 key telephone system; and 100, 101A or B, and 102A key equipment.

• Time-out control.

• Manual intercommunicating circuit with busy lamps.

**2.02** The 200H-type KTU consists of panel-type key telephone units mounted and factory-wired on a 26A apparatus mounting, with or without a 64B1-100 cable terminal. (See Fig. 1.)

**2.03** Fig. 2 shows the arrangement, coding (without cable terminal), and key telephone units used in the 200H-type KTU.

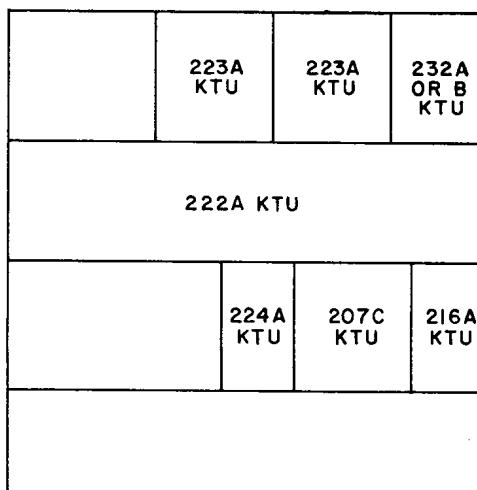

**2.04** Numbers and letters added to the basic code designate the four arrangements of the 200H-type KTU. For example, 200H15DC is a unit as follows:

200H — type

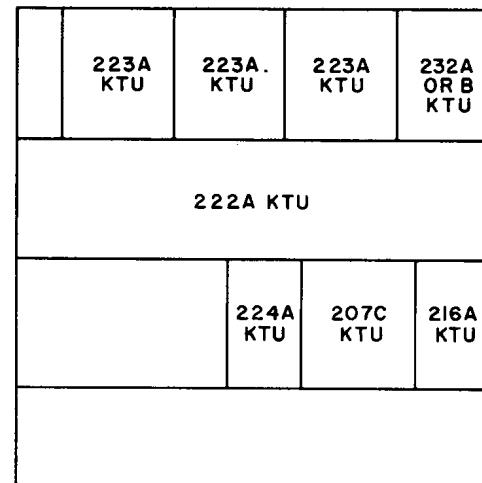

15 — number of station circuits

D — dial-selective intercommunicating circuit

C — 64B1-100 cable terminal

200H 15D

200H 18D

Fig. 2 — Block Diagram

- 2.05** The 64B1-100 cable terminal, when ordered as a sub code C, is a 100-pair inside wiring cable terminated at one end on the back of a terminal plate assembly per ED-69366-50, Group 3, and terminated at the other end on the back of key telephone units.
- 2.06** The 64B1-100 cable terminal equipped with a 15-foot cable tail may be ordered separately. It may have application other than for the 200H-type key telephone units.
- 2.07** The 232A or B KTU is furnished with each 200H-type unit, but the KS-15900, List 1 interrupter is **not** furnished and, if required, must be ordered separately. All leads associated with the 232A or B KTU are accessible at the terminal panel when a 64B1-100 cable terminal is provided.
- 2.08** The 26A apparatus mounting may be installed on the wall, on relay racks, directly on the floor, or in equipment cabinets. Refer to the C Section covering equipment cabinets and apparatus mountings for installation.
- 2.09** The 200H-type KTU provides mounting space for power plants or additional local requirements.

### 3.00 CONNECTIONS

- 3.01** Table A shows where the connections are made for running cables or key cables at both the key telephone units and the terminal plate.
- 3.02** Fig. 3 shows strapping between units, power connections, and key cable connections.
- 3.03** This package is factory-wired for the digit 2 to be used as the initial digit of 2-digit codes. When required, any other digit except 1 may be used as the initial digit. The digit so assigned cannot be used as a single-digit station code.
- 3.04** Refer to SD-69286-01 and the C Section entitled 6A Key Telephone System, Two-Talking Link Connections for additional features.

### 4.00 MAINTENANCE

Circuit drawings (Fig. 4 through 11) are included as an aid in making connections and clearing trouble.

## 5.00 CIRCUIT NOTES

**5.01** For all system arrangements where direct current is used to operate the bells, buzzers, or lamps, assume a current drain of 0.056 ampere for each 7A-type bell or buzzer and a current drain of 0.035 ampere for each A3 lamp. The current drain for the 2-talking link is as follows:

2-Talking Link Arrangement	Max Current Drain at Min Voltage (20 Volts)		Current Drain During Normal Talking Condition (24 Volts)	
	Battery Supply			
	A	B	A	B
	amperes			
Installation over 9 Codes and Using Transfer Circuit (max 36 codes)	0.374	0.827	0.205	0.200
Installation with Camp-On Circuit	0.454	1.061	0.215	0.210

**5.02** The dc and ac power supply may be provided from a J86471A, List 1 power plant. Direct current, 20 to 26 volts, may be supplied from local or building battery. Power supply for lamps may be supplied from 393A or 393B transformer, and ringing supply may be over pair leads from central office, PBX, or J86731C, List 1 power plant (107C frequency generator).

**5.03** At installations where the 200H-type KTU is used in conjunction with other key systems, the J86731B, List 1 power plant may be required for the lamp supply. The 10-volt capacity of this power plant is four hundred twenty-five 51A lamps.

**5.04** Power supply arrangements and limitations appear in the C Sections covering station systems power supply.

**5.05** Fuse Requirements:

Desig	Amp	Potential Fused	Quantity
		volts	
A Bat.	2	— 20 to — 26 tlk bat.	One per system
B Bat.	2	— 20 to — 26 sig bat.	

**5.06 Options provided for in 200H-type KTU:**

Option		Wiring
Station Audible Signal	Over <i>T</i> and <i>R</i> leads	Y
	Over separate signaling pair	Z
Flash, Wink, Ring, and Time-Out Circuit*	Provided in package	X
	Provided externally	W

\* This option does not appear as a 6A Key Telephone System option.

**5.07 6A system options wired into the 200H-type KTU:**

## (a) Options Associated with System

Wiring	Option
W	With Transfer Circuit (over 9 codes)
G	With Camp-On
H	Without Aux Rel Busy Lamp Ckt
S	Without Aux Rel Lamp Flash Ckt
AL	Single Spurt Audible Signal
AJ	Dial, Busy, and Audible Tone*

\* Busy tone only furnished.

## (b) Options Associated with Stations

E	With Automatic Cutoff	
Y	Over T & R Leads	Station Aud Signal
Z	Over Separate Pair	
AE	Signal Key Selection of Local Station	

**5.08** The *CO* lead connection is required when an associated No. 1A or 1A1 system flashing circuit is used as part of the No. 6A installation.
