## NEW SELF-CONTAINED SPEAKERPHONES

**more convenience for customers . . .  
more revenue for telephone companies**

Now our Speakerphones make hands-free telephoning better than ever before. They offer these outstanding advantages over previous models:

- **SPACE-SAVING DESIGN**

Our new Speakerphones are completely self-contained. Everything—including both speaker and microphone—is enclosed in one compact housing that measures only 10 inches wide by 7 inches deep.

- **REDUCED ECHO**

Advanced electronic circuitry almost totally eliminates the familiar “barrel effect” common with other loudspeaking phones.

- **IMPROVED MICROPHONE SENSITIVITY**

A new high-quality electret microphone picks up conversations from across the room. No one has to shout or crowd around the Speakerphone.

# MORE BUSINESS-BUILDING FEATURES

Our new Speakerphones have built-in extras . . . sales-building features that adapt this phone to any situation.

## Recall

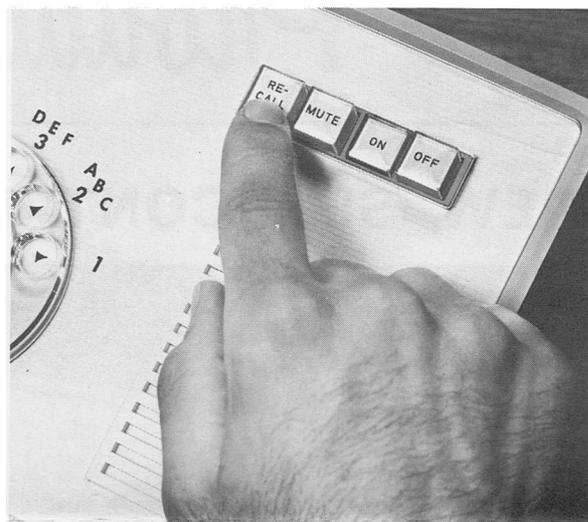

Recall is a convenience feature for people who make a lot of calls in succession. By pushing just one button, the customer can "hang up" and immediately begin dialing his next call.

## Privacy

A mute button cuts the microphone out of the circuit while a call is in progress. The party on the other end of the line doesn't hear anything he's not supposed to hear.

## Handset Operation

Just pick up the handset, and the Speakerphone becomes a regular phone.

## coming soon --- Multi-Line Speakerphones

Soon your key system customers will be able to enjoy hands-free Speakerphone service, too. Coming down the pike are two multi-line models: 9 lines and 15 lines, both with a hold feature. Your GTE Automatic Electric marketing representative will have full details on availability of these extra revenue-producing phones.
