CORD & WIRE COMPANY

MANUFACTURERS OF CORDS, WIRES AND CABLES

4723-31 WEST MONTROSE AVENUE • CHICAGO 41, ILLINOIS

Dear Friend:

I am taking this opportunity to invite our friends in the Telephone Industry to visit our plant whenever it is convenient.

Those of you who have specified RUNZEL CORDS in the past are fully aware of the high quality of our products and the service we are equipped to give. The repeat business we receive assures us of this.

Broadening our scope of service to new accounts however, is also of vital interest to us, since we are constantly extending our facilities in order to render the best possible cooperation to the Telephone Industry as a whole.

For more than a half century my family has concentrated on making cords, wires and cables. My father was one of the pioneers in the field. Like many another man who devotes his entire span of life to one art, profession or industry, he got a keen satisfaction out of making a good product and giving good service; regardless of whether times were good or bad.

New developments to meet modern improvements in telephone service - experiments with new materials - greater efficiency in manufacturing processes - efforts such as these are going on continuously within these walls. Our reward has been ample. We enjoy the confidence of our customers - the growth of our business.

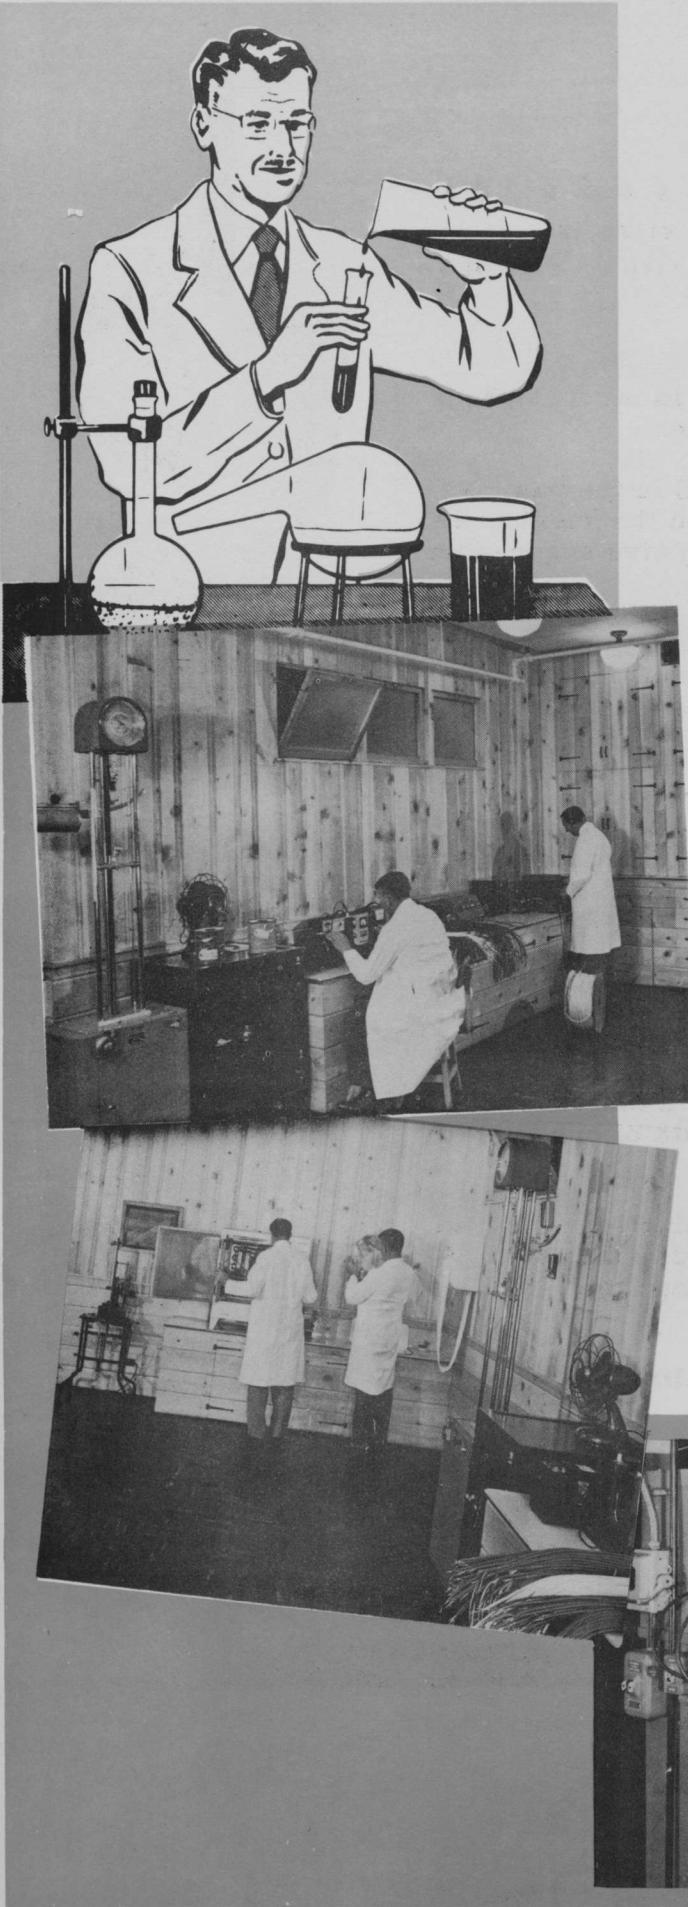

We have prepared this catalog to facilitate the selection of the best type of cord for your every requirement, and to simplify ordering replacements for those who wish to change to RUNZEL CORDS for the improvement of their service.

We assure you of complete satisfaction in all dealings with us and look forward to serving you.

Sincerely,

O.H. Runzel Jr.
President
Runzel Cord & Wire Company

TESTING AND DEVELOPMENT LABORATORY

The RUNZEL LABORATORY was prompted and created through the desire of the management to:

1. Scientifically develop and improve the products of the Runzel Cord & Wire Co.
2. Provide a cord clinic whereby accomplishments (or failures) of new processes may be scientifically analyzed.
3. Study action and reaction of chemical influences upon its various products.
4. Technically explore causes for cord failures as they occur in practical usage.
5. To replace theories with candid and scientific fact.
6. Provide diagnostic proof for the manufacturing technique of its products.
7. Maintain exacting quality standards.

Mr. W. L. Runzel, Jr., founder of the Runzel Laboratory, in order to perform an authoritative and exhaustive diagnostic research service to the industry has provided a rare complement of scientific apparatus such as might be found in the Laboratories of our great Universities of technical learning. No facility has been denied, no expense spared to place at the disposal of the technician such equipment as required to explore every phase of analysis as applied to the communications field.

RUNZEL LABORATORY

Abrasion Testers . . . determine resistance to wear of outer coverings.

Humidity Cabinet . . . for testing waterproof properties of cords.

Tensile tester . . . for testing tensile strength, elongation and set of materials used in cord manufacture.

Dielectric testers . . . to test the insulating properties of materials. Dielectric strength.

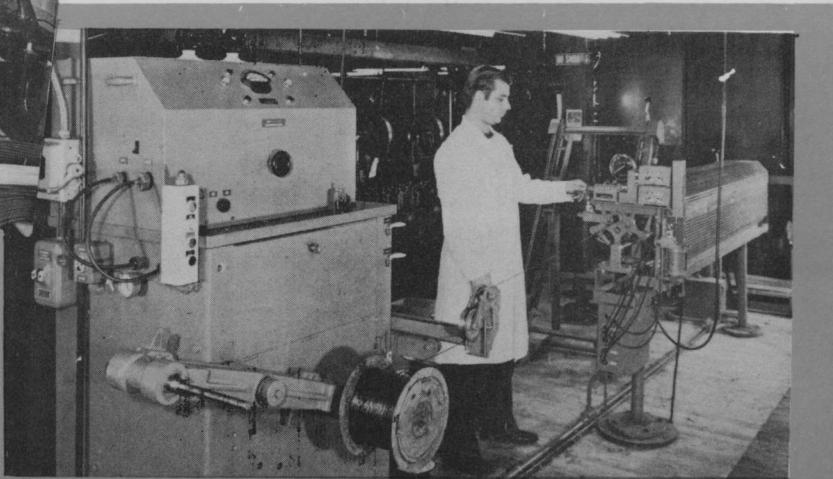

Capacity bridge . . . to measure the capacity between conductors.

Cord testers . . . to check continuity, resistance and dielectric strength of telephone cords.

Aging Ovens . . . to determine life of materials used in cords.

Fault locator . . . detects shorts or opens in telephone cable.

Spark tester . . . Every foot of RUNZEL wire is assured of perfection when it passes through this apparatus. Any dielectric flaw in covering would immediately "STOP" entire machine.

This Catalog

This catalog departs from precedent in Telephone Cord catalogs and is, we believe, the most comprehensive reference book and guide to Telephone Cord replacements ever published.

Proper selection of the desired cord for every type instrument is made simple—delays through incorrect specifying is eliminated and a full understanding of every detail is immediately at hand.

How to select proper cords

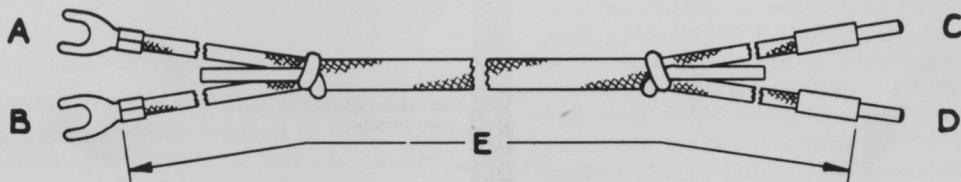

To aid you in choosing the proper cords for the equipment you use, this catalog presents three methods of selection. For purposes of illustration let us assume that you wish to order a two conductor deskstand cord but you are not certain of its trim. By referring to our index, you can locate the page number for "DESKSTAND CORDS—TWO CONDUCTOR"; turning to the page indicated, notice that in this section, as in all others, there is a replacement list which indicates the Runzel cord made as a replacement to the other manufacturer's types. If you know the original manufacturers' cord code number you can easily trace it in our replacement listing to choose the proper RUNZEL cord.

If information is lacking on the original cord code number you can trace the proper cord by referring to the "Specifications" which immediately follow the replacement list. Here you will find exacting details on the trim and make-up of all cords shown in that section. By comparing the

trim of the cord you wish to replace against the trim in the specification listing or by referring to the column entitled "To Be Used On The Following Equipment" you can locate the instruments on which the cord is to be used. Then note the RUNZEL code number of that cord and you have made the correct selection.

The foregoing has briefly described the methods of cord selection, however we suggest that you read the following section which describes the method we have used to give you exacting specifications of each and every cord shown in our catalog.

Owing to the thorough coverage of all types of telephone instrument and switchboard cords embraced in this catalog, a master-guide cord detail is given under each general classification. By following the specifications of any one type of cord, all other types can be easily examined by the same method.

DESK STAND CORDS, TWO CONDUCTOR—SPECIFICATIONS

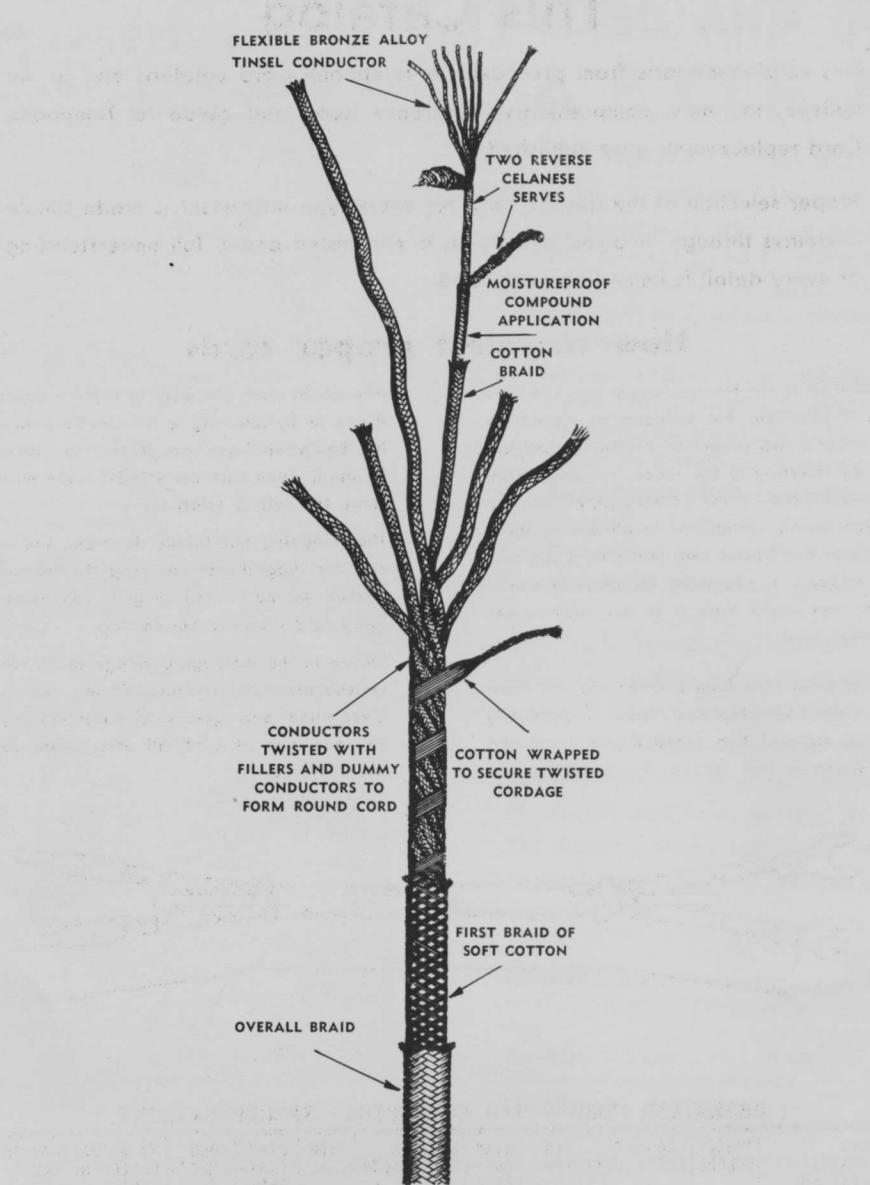

EXPLANATION OF MASTER GUIDE AND SPECIFICATIONS

The master-guide cord shown above is a two conductor desk-stand cord. As you will notice each leg or conductor is marked with a letter, i.e., A, B, C and D. The letter is an identification for the leg and refers to the detail shown in the specification immediately below. For example, Leg "A" referring to the specification, has a tracer color of green and is 4½ inches long with a No. 238 terminal attached. Leg "B" has a red tracer color, and is also 4½ inches long with a No. 238 terminal attached. The next column in the specification describes the type of stay fastener. In this case s/c indicates that there is a stay cord. Letters "C" and "D" follow the same pattern for the legs on the opposite end of the cord. Tracing them in the specification you will note they are both 4½ inches long and each have a No. 238 terminal attached. Their tracer colors, of course, are in accordance with "A" and "B". This end of the cord also has a stay cord as a fastener. The overall cord length is indicated by the letter

"E" and is exactly as indicated on the drawing, in that it is measured from the necks of the terminal of opposite ends, except when there is an asterisk indicating body length. The body length of a cord is that part of the cord which is covered by the outer braid or the distance between the beginning of the legs of the opposite ends.

The last column of specifications refers to the equipment for which the cord is intended. Detailed drawings of each terminal are shown on the last four pages of this catalog.

The detail to which this catalog is carried may not be necessary for the basic information you need for ordering, but we believe the catalog will be of value to you in selecting the proper replacements for your equipment and as a reference.

General Information

1. Standard switchboard overall braid is white if no other color is specified. Red and green available upon request.
2. Standard instrument overall braid is brown; black will be supplied upon request.
3. All railroad instrument cord orders are supplied with standard brown glazed overall braids unless black is specified.
4. Code numbers underscored on Replacement Lists indicate the original manufacturer.
5. Runzel original cords indicate a cord designed by our engineers.
6. When more than one code number appears in the Old Runzel

Code Number Column on the Replacement Sheets, this indicates the named cords were so similar in trim as to permit consolidation under the present trim.

7. An asterisk appearing in the Cord Length Column indicates body length only exclusive of leg lengths.
8. Switchboard and Patch Cord diameters are shown in either decimal or fraction dimensions in accordance with the practice of the original manufacturer.
9. All cord lengths shown are the standard lengths furnished.

TERMS AND SHIPPING

GUARANTEE:

Runzel Cords are guaranteed to meet all service and engineering requirements. Any defective material may be returned for credit or replacement.

RETURN SHIPMENTS:

In the event material is to be returned to our plant for credit or replacement please write us for complete return instructions. All such requests will have our prompt attention.

TERMS:

All domestic accounts are sold at 2% 10 days, net 30 days.

ROUTING:

Shipping terms are f.o.b. Chicago, Illinois. Shipments will be via best way unless specific route is indicated. Parcel Post shipments are insured for full value at a nominal charge.

ORDERS:

Catalog number and description should be shown when ordering material. Standard insulations, colors and lengths will be furnished unless otherwise specified. Telephone or telegraph orders should be immediately confirmed by mail and marked "Confirming." Verbal or wired orders will not be shipped until written confirmation is received.

WHY RUNZEL CORDS GIVE LONG AND SATISFACTORY SERVICE

To witness the manufacture of RUNZEL cords never fails to fascinate visitors to our plant. Each operation, while intricate almost to the point of appearing tedious, is nevertheless accomplished with precision dexterity. Specially designed automatic machines make light work of a seemingly difficult series of operations which result in a finished product of much finer quality than the hand-weavers of olden times ever even hoped to attain.

The basic conductor in all RUNZEL cords consists of a fine bronze alloy tinsel wire made up into six strand, twelve thread cords. This delicate tinsel contributes the strength-flexibility which is so essential in all types of telephone instrument and switchboard cords. It is so constructed as to withstand hard usage, yet flexible beyond the prescribed formula of electrical engineering standards.

In addition to the fine materials used in the manufacture of RUNZEL cords, years of experience, scientific research, laboratory tests, experimentations by trial and error procedures . . . round out a product that meets every requirement of a gigantic industry . . . an industry which today circles the globe with a net work of wire . . . carrying the communication systems of Governments, Kingdoms and Republics . . . Industries of world-wide operation . . . People of every walk of life.

CONSTRUCTION DETAILS

All RUNZEL telephone instrument and switchboard cords have their beginning with the above referred to tinsel wire conductor. We then proceed to insulate, twist, braid and trim to develop your finished RUNZEL cord. It is the painstaking care in these processes which improve the fine adaptability, smooth, long wearing braids and properly insulated conductors which are responsible for the clarity of reception for which RUNZEL cords are popularly known.

To provide our customers with a choice of grades or qualities of cords, we maintain a selection of inner conductor insulations and outer braids for all types of telephone instrument and switchboard cords. The following paragraphs will describe the various grades available which you may

see fit to use in the equipment you order. Each grade has been thoroughly tested in both laboratory and service. Various climates or service conditions determine which type of insulation or outer braid is best suited to your requirements.

"MOISTUREPROOF INSULATION"

Moistureproof insulation consists of an even, double serve or wrap of fine thread cellulose acetate applied in opposite directions over the tinsel. An asphaltic wax compound is applied on the cellulose acetate insulated conductor to serve as a guard against dampness and moisture. It is so applied as to penetrate the outer serve to a certain degree without touching the tinsel conductor and yet thick enough to insure the greatest amount of moistureproofing possible. This compound will not harden and remains pliable to give the greatest amount of flexibility. A soft cotton braid is applied over the moistureproofed tinsel conductor to complete the insulation. Our basic line of telephone instrument and switchboard cords utilize this type of insulated tinsel conductor. The outer braid of moistureproof cords consist of mercerized cotton on instrument cords and glazed cotton on switchboard cords.

"THERMOPLASTIC INSULATION"

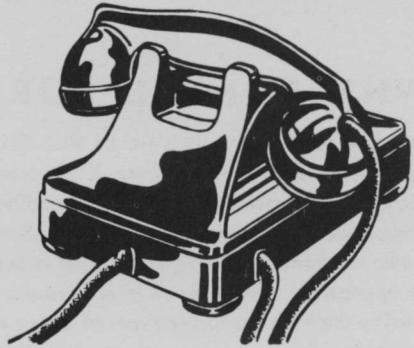

A few years ago a satisfactory thermoplastic compound was formulated which would encase the delicate tinsel conductor in a non-injurious, waterproof, flexible, and color coded jacket. This type of insulation has proved to be exceptionally serviceable because it is waterproof and immune to such harmful solvents as petroleum products, oils, grease, etc., and most acids, including hand sweat. The thermoplastic compound we use is staple, will not decompose, nor will it become dry or brittle. This insulation remains flexible and serviceable within wide temperature limits, a problem which previously had barred the use of such insulation. After the many years of experience and study with this type of insulation, we consider it the best type available.

The following types of outer braids are supplied on moistureproof and thermoplastic insulated conductors and are designated by the figures "V", "VB" and "VN". The figure "V" denotes the thermoplastic insulation of the tinsel conductor and the figure immediately following, the type of braid.

RUNZEL TELEPHONE CORD INSULATIONS:

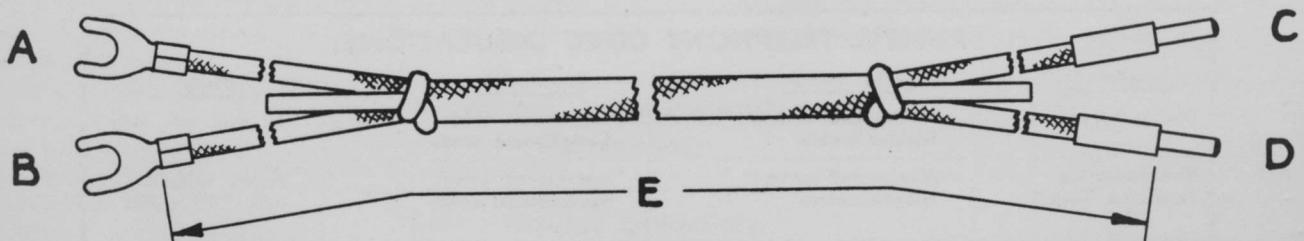

<u>Insulation:</u>	<u>Outer Braid:</u>	<u>Supplied on:</u>	<u>Order:</u>
Moistureproof	Mercerized cotton Glazed cotton	Instrument cords Switchboard cords	By code no. only
Thermoplastic Insulated Tinsel "V"	Mercerized cotton Glazed cotton	Instrument cords Switchboard cords	Follow code no. with "V" suffix
Thermoplastic Insulated Tinsel & Thermoplastic Braid "VB"	Thermoplastic Monofilament Thread Braid	Instrument cords only	Follow code no. with "VB" suffix
Thermoplastic Insulated Tinsel & Nylon Outer Braid "VN"	Nylon Thread Braid	Switchboard cords only	Follow code no. with "VN" suffix

CORD MAKING

The RUNZEL plant is a veritable beehive of activity. Row after row of automatic cord braiding machines "sing a song of production" to meet the ever increasing demand for RUNZEL CORD. Special training is required to handle these machines. Constant inspections assure uniform quality.

YOU ORDER IT . . . WE'LL MAKE IT

No matter how exacting your requirements . . . or how difficult the problem . . . when you're in need of telephone or switchboard cord of any type and for any service RUNZEL can supply your need to your utmost satisfaction.

RUNZEL engineers are constantly reaching out . . . exploring new horizons . . . developing new and better cords for the industry. For example: the new, tough, NYLON switchboard cords recently introduced by us. You came to us with your problem . . . told us what you had to have . . . then our research engineers went to work and produced . . . not just a cord to do the job, but the best possible cord to meet your requirements.

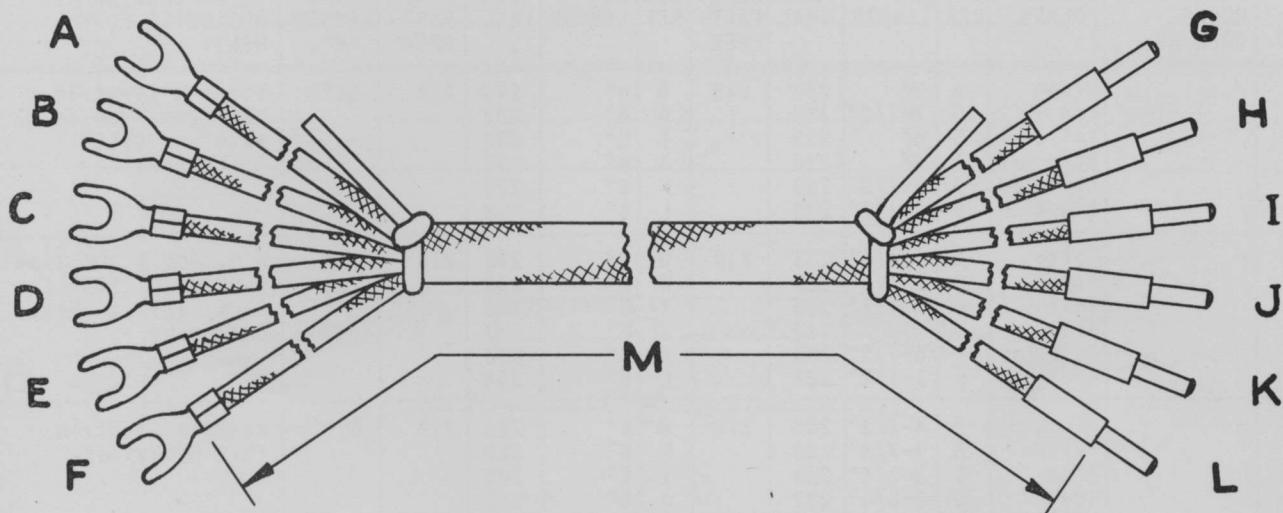

You can always be confident you're buying the finest when you specify RUNZEL cords . . . RUNZEL specializes in cord and wire for the Telephone Industry. All our efforts and facilities are directed to one objective . . . to provide serviceable products of outstanding quality.

You, our customers deserve much of the credit for the development and perfection of RUNZEL products . . . Your high standard of acceptance . . . your alert cooperation and response to our effort has spurred us on to new ideas and greater developments.

We repay you for your confidence with this thought . . . YOU CAN RELY ON RUNZEL.

Switchboard operators, whether serving public subscribers or private industry appreciate the fine workmanship of RUNZEL cords. Outstanding among the many features of RUNZEL cords is the trimming operation. Skilled hands, trained to perform in accordance with rigid specifications...constant and varied inspections as the work progresses...produce a consistent quality of workmanship in every cord of our manufacture.

Clear reception, free of foreign interferences, lightens the work of operators whose work-a-day routine is telephone communications.

Breastplate cords are subject to severe wear under even normal working conditions. RUNZEL cords have set a record for dependable service . . . largely because they are precision made . . . they withstand severe usage.

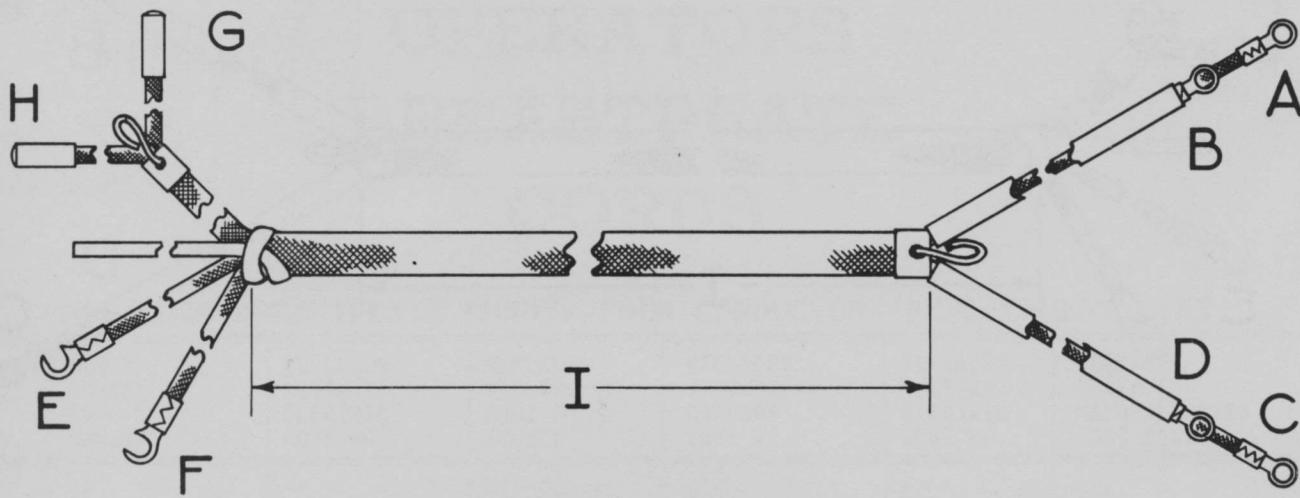

The formula for the manufacture of RUNZEL breastplate cords is a rigid one . . . frequent inspections as the work progresses maintains the prescribed quality demanded by the formula. When you specify RUNZEL cords you are assuring yourself of the finest in quality, service and reception. You can count on maximum service because we put years of experience into every inch of RUNZEL cord.

QUALITIES OF A GOOD SWITCHBOARD CORD

There is more to the make-up of a switch board cord than meets the eye. We who have produced cords for many years by the millions know that there are many important methods of manufacture which account for the service and easy handling of a good switchboard cord.

The part of a cord which receives the hardest wear is the outer braid. Realizing this, we exercise special care in seeing that the outer braid is applied with the proper tension and is put on smoothly and evenly. When this is done you are sure the braid will wear evenly and to its utmost. Also, a properly applied braid accounts for the flexibility desired.

Another important factor of the switchboard cord is how it is trimmed. Each cord

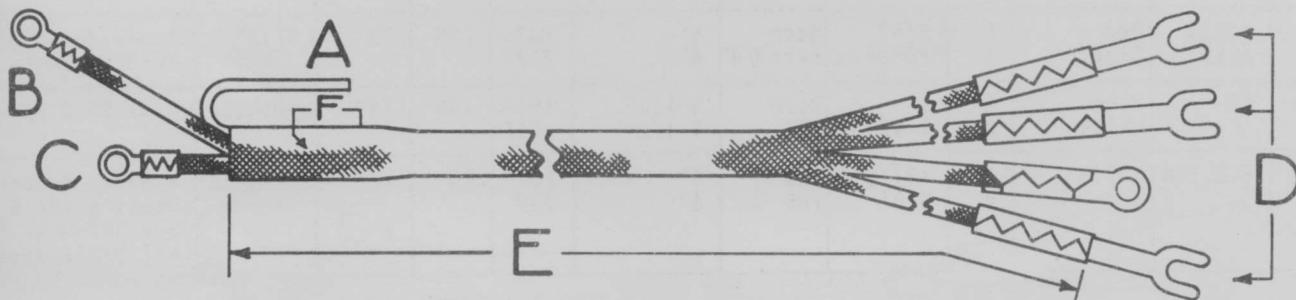

is made to fit a particular plug and in each case the leg lengths of the insulated tinsel must be accurately cut and trimmed and securely connected with the proper size terminal to insure the user that it will fit accurately and easily on the inner connections of the switchboard plug. Also, properly measured leg lengths and positively attached terminals on the conductors at the board end of the cord contribute to the easy installation of the cord.

Naturally, the inner conductors of the switchboard cordage must be perfect. In the Runzel method of fabrication the conductors are twisted with dummies and fillers with the proper length of lay and served with fine cotton to insure a smooth body surface. From this the completed cord is then made.

Frequent inspections as each cord progresses thru skilled hands, trained to the RUNZEL standard of manufacture, produces a cord of fine quality . . . RUNZEL switchboard cords unfailingly give long and satisfactory service because we "make them that way".

SPECIAL SERVICES

We maintain a department which specializes in cord repair work for the convenience of our customers in the telephone industry. These facilities are available for the following repairs:

DAMAGED OR WORN CORDS

Send such cords to us. If upon examination we determine that the cord may be satisfactorily repaired we will complete such repairs for a nominal charge. Any cords found to be damaged or worn beyond repair will be returned.

REBUTTING SWITCHBOARD CORDS

In many instances a cord may be rebutted thus renewing its ability to function satisfactorily. The cost of such work is relatively small and often serves the purpose of prolonging its life of service.

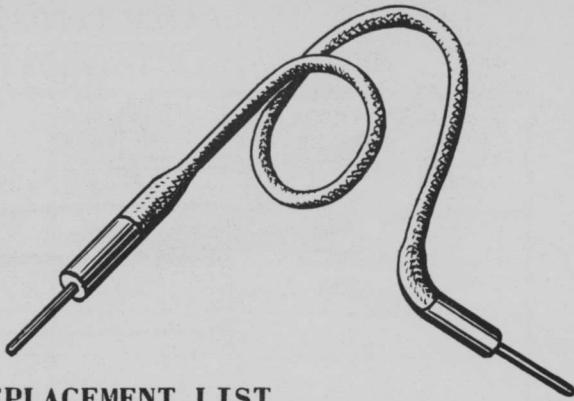

ATTACHING SWITCHBOARD PLUGS

Work of this type, whether the plugs are purchased from us or elsewhere is done at nominal charges.

SPECIAL ORDERS

We make special cords to meet any requirement. Where out-of-the-ordinary cords are wanted . . . special trim . . . or whatever the specifications may demand our engineers will assist in completing your ideas or plans in the matter of special design and equipment.

TINSEL CORDAGE

Running length tinsel cordage is available in a choice of either brown or black outer braid.

When ordering please specify number of conductors, 2, 3, 4, 6, available from stock. Larger combinations to order.

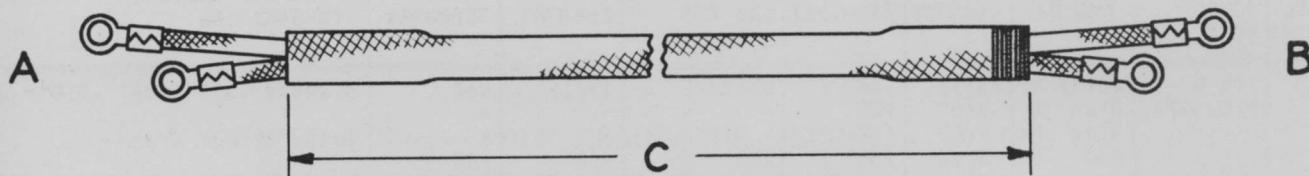

This cordage is made according to RUNZEL standard as described in the fore-part

of this catalog and may be relied upon to fully meet the requirements for which it is intended.

Running length cordage of our "V", "VB", and "VN" moisture-proof and insulated cord is also available. Additional information concerning this series may be found by referring to "CONSTRUCTION DETAILS" chart.

SERVICE TO THE TELEPHONE INDUSTRY

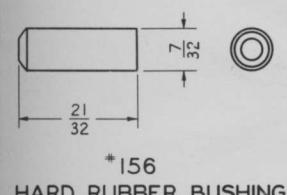

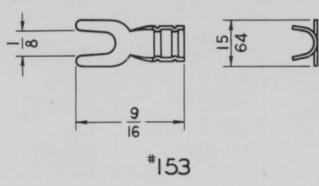

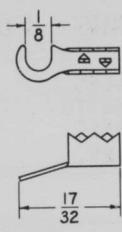

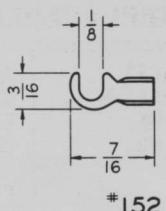

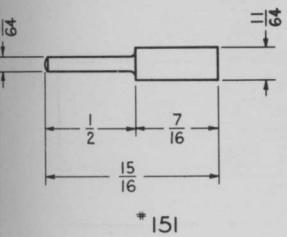

For many years the RUNZEL CORD & WIRE CO. has devoted its facilities to the advancement of its service to the telephone industry.

Skilled engineers are at work constantly, experimenting and testing new developments which will result in broadening our scope of service and furnish improvements in service for the communications industry as a whole.

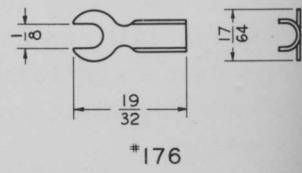

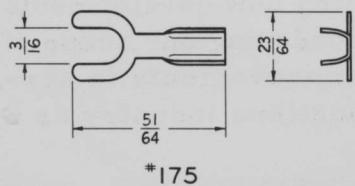

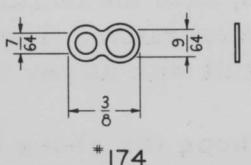

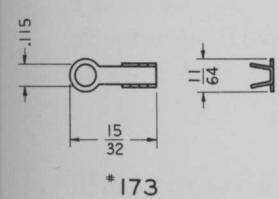

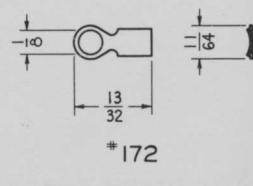

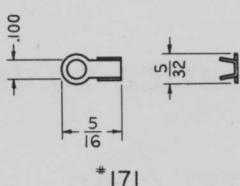

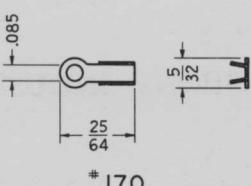

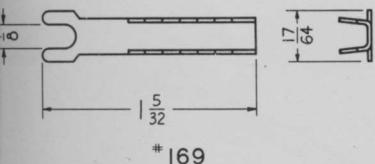

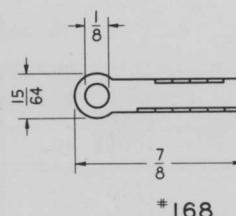

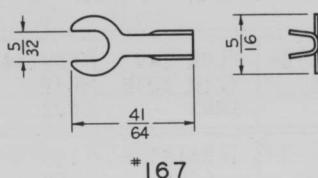

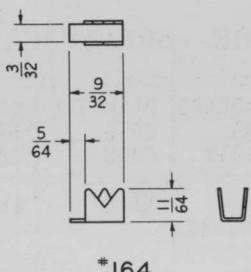

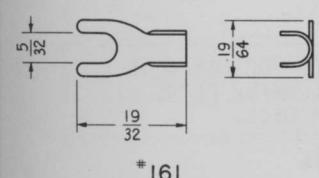

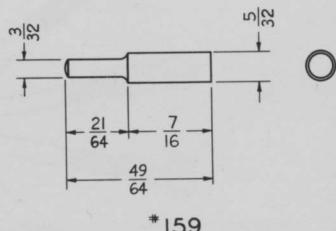

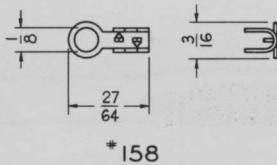

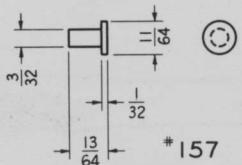

We welcome your requests to assist in the development of new ideas . . . in fact we encourage you to submit your problems to

us for possible solution. We realize that you who are in constant touch with practicality often are confronted with problems of service. Lack of special facilities necessary to cord manufacture makes it impossible for you to develop your ideas. We on the other hand, have the facilities and the willingness to be cooperative. Therefore please feel free to consult with us any time.

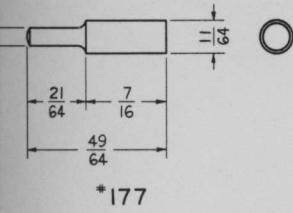

We hope the above dissertation leaves with you the thought of its intended purpose: That the RUNZEL CORD & WIRE CO. seeks your cooperation to the ultimate improvement of SERVICE TO THE TELEPHONE INDUSTRY.
