

832- AND 2832-TYPE TELEPHONE SETS

IDENTIFICATION, INSTALLATION, CONNECTIONS, AND MAINTENANCE

1. GENERAL

1.01 This section contains information for the 832- and 2832-type telephone sets. The 832- (rotary) and 2832- (TOUCH-TONE® service) type telephone sets are special plug-ended, 10-, 11-, or 13-button key telephone sets initially designed for use with the 7A Communication System (COM KEY® 718 key telephone system). These sets also may be used with the 21A Communication System (COM KEY 2152 key telephone system). For information on COM KEY key telephone systems, refer to appropriate sections in Division 518.

1.02 The reasons for reissuing this section are listed below. Revision arrows are used to emphasize the more significant changes.

- Revise Fig. 9
- Add "or equivalent" for references concerning 533K diode.

2. IDENTIFICATION

2.01 The 832BM (Fig. 1), 2832BM, 832CM, and 2832CM (Fig. 2) are modular type telephone sets and will replace the 832B, 2832B, 832C, and 2832C telephone sets, respectively, which are hereby rated MD. The 832DM, 2832DM, 832EM, and 2832EM are also modular sets and are electrically and functionally equivalent to the 832BM, 2832BM, 832CM, and 2832CM sets, respectively, except that they have been adapted for wall mounting. The modular sets are equipped with a G15A-50 handset and H4DU-50 handset cord which plugs into a 616T jack mounted on the left front of the telephone set base (Fig. 3). Current production models of these sets also are equipped with an improved line switch and an improved Automatic Button Restoral (ABR) feature. Some early production BM and CM sets do not have this feature.

2.02 The 832A (MD) and 2832A (MD) are 10-button telephone sets equipped with a 647G5 key con-

sisting of a Hold button, seven line buttons, and two intercom buttons. There is an apparatus blank to the right of the dial which may be removed to mount a 651C key for RING TRANSFER, a 651D key for Privacy Release (PRIV RLS), or a 651F key for RECALL. If required, the privacy circuit board can be field installed.

2.03 The 832B (MD), 832BM, or 832DM and 2832B (MD), 2832BM, or 2832DM telephone sets are 11-button sets similar to the 832A (MD) and 2832A (MD) sets, respectively, except that the eleventh button, to the right and below the key assembly is equipped in the factory for RECALL. This key takes the amber key cap provided. PRIV RLS and RING TRANSFER features **cannot** be provided in the 832B, BM, DM and 2832B, BM, DM telephone sets. If required the privacy circuit can be field installed.

2.04 The 832C (MD), 832CM, or 832EM; 2832C (MD), 2832CM, or 2832EM; and 13-button telephone sets equipped with the 647G5 key and also a 647S5 key with buttons for RECALL, PRIV RLS, and RING TRANSFER. The remainder of the top key space is blocked off by a collar assembly. These sets are also equipped and factory wired with the privacy circuit.

2.05 The DM, EM (wall type) sets and BM, CM (desk type) sets are not interchangeable due to the mechanical changes in the handset hanger and the new 6C1-50 housing.

2.06 An adapter (833A-50) will be furnished with each DM and EM telephone set for wall mounting. The switchhook of these sets has been designed to hang vertically to the left of the housing. The sets are equipped with a hard-wired mounting cord which can be coiled up and concealed in the adapter or the cord can be extended down the wall through a notch in the adapter for termination to appropriate connector-ended cable. All maintenance can be performed on internal components of these sets without removing the set from the wall

2.07 All of the 832- and 2832-type sets provide the same basic services such as pickup, hold, but-

NOTICE

Not for use or disclosure outside the
Bell System except under written agreement

Fig. 1—832BM Telephone Set

ton illumination, and intercom. They are equipped with a loudspeaker to provide tone and voice signaling. The level of the tone is adjusted by a volume control knob located under the right side of housing. Two or more CO/PBX lines may be conferenced by simultaneously depressing the buttons associated with the lines to be conferenced. The two intercom lines may also be conferenced. Intercom and CO/PBX lines cannot be conferenced. The Automatic Button Restoral feature restores all depressed buttons to the unoperated position when the handset is replaced.

2.08 Multiline conferencing is a feature of these telephone sets. Since there is no amplification involved, this type conferencing is limited. When lines are conferenced, using this manner of conferencing, distant stations may have trouble hearing each other and transmission is not guaranteed.

Note: When a telephone set is modified for 4-wire service, multibutton conferencing between 4-wire and 2-wire systems is not recommended.

Fig. 2—2832CM Telephone Set

2.09 The 832- and 2832-type telephone sets may be used with either the 3-type (MD) or 4A speakerphone system.

The limited number of mounting cord conductors places a restriction on the location of speakerphone components unless it is desired to give up one pickup line. Refer to Section 512-620-487 or 512-740-471 for connection information for the 3-type (MD) or 4A speakerphone system, respectively.

2.10 Current 832- and 2832-type telephone sets are available in ivory (-50) only. These sets will be shipped with a disposable faceplate. It will be necessary to order a faceplate separately (Table A).

2.11 Any station set may be optionally wired to ring on **one** CO/PBX line only, or for common audible ringing.

When common audible ringing is wired to a station other than the attendant station (Code 0), that station cannot have the ring transfer option.

Fig. 3—2832CM Telephone Set Base

Ordering Guide

2.12 For telephone set, faceplate, and replaceable component ordering guide, refer to Table A. See Table B for color ordering information.

2.13 The following optional apparatus may be associated with desk type 832 and 2832 sets (order as required).

(a) Kit of Parts, D-180656 (to provide a wall shelf mounting arrangement) consists of the following:

- 1—840362446 shelf
- 1—840362479 clamp
- 1—801812553 screw.

Note: If a (wall type) set is to be installed, a DM or EM code set is available.

(b) Diode, 533K or equivalent (order one for each rotary dial station to be restricted).

(c) 4A Speakerphone (order one each of the following for each station to be equipped with speakerphone):

- Loudspeaker, 108AA- (add color suffix; see Note) (includes 7-foot D20N mounting cord)
- Transmitter, 680AE- (add color suffix; see Note) (includes 7-foot D8S mounting cord)
- Adapter, 223D-49 (includes 7 foot M16H and 25 foot M2FG cord)
- Unit, Power, 85B1-49.

Note: The transmitter and loudspeaker set will be shipped in one of five promoted colors: Black (-03), Ivory (-50), Green (-51), White (-58), and Light Beige (-60).

(d) Ringer, E1C (MD) or E1CM (one for each CO/PBX line to be wired for power failure transfer).

(e) Key, 688A (manual do-not-disturb option).

This key is intended for use with the 7A Communication System. It can also be used with 21A Communication System at stations not equipped with the HFAI option.

(f) Kit of Parts, D-180990 (4-wire interface for the 7A and 21A Communication Systems) consists of the following (Fig. 4):

1—842533440 relay assembly

1—801809245 (P-180924), 4-40 by 5/16-inch binding head machine screw

1—801682956 (P-168295), 6-40 by 5/16-inch binding head machine screw (not required for these sets).

2.14 The following optional apparatus will only be used with the 832A (MD) or 2832A (MD) telephone sets (except as noted).

Fig. 4—Mounting Location for D-180990 Kit of Parts for 4-Wire Service

- D-180487 (A&M Only) Kit of Parts (RING TRANSFER) order one only per system if the attendant station is to be equipped for ring transfer.
- D-180488 (A&M Only) Kit of Parts (PRIV RLS) order one for each station to be equipped for privacy release.
- D-180591 Kit of Parts (RECALL) order one for each station to be equipped for recall.

Note: Only one of the previously listed features can be provided.

- D-180486 Kit of Parts (Privacy Circuit Board), order one for each station to be locked out. Can be added to the 832A (MD), 832B (MD), BM, DM, 2832A (MD), 2832B (MD), BM, or DM telephone set.
- Transmitter, 683AE-50 (for HFAI feature of COM KEY 2152 key telephone system) also includes a DO-NOT-DISTURB switch
- Adapter, 268A (for mounting 683AE-50 transmitter when using DM or EM type telephone sets).

3. INSTALLATION AND CONNECTIONS

3.01 Install telephone sets at desired locations, making sure that any required options shown in the tables and schematics are installed before the telephone set is connected.

3.02 All DM and EM (wall type) sets are shipped with an 833A-50 adapter, screw, and clip (Fig. 5) which are used for mounting the telephone set to a vertical surface. Install the 833A-50 adapter and telephone set as follows.

(1) Mount the adapter to the wall or vertical surface as shown in Fig. 6, using appropriate fasteners (Section 080-720-105). If the mounting cord is to be dressed down the wall, it is necessary to pass the cord through the notch in the adapter before final attachment of the adapter to the wall. If the cabling enters through the wall, the mounting cord may be contained within the adapter.

(2) Remove faceplate and housing from telephone set. Use a KS-21107 type releaser or equivalent to release the faceplate catch.

(3) Hang the telephone set on the adapter from the headed rivets that protrude from the base pan (Fig. 6).

Note: It may be necessary to slightly bend the top slotted portion of the adapter so the headed rivets of the base pan will align properly.

(4) Secure the telephone set base with the clip and screws at the bottom of the adapter (Fig. 5).

(5) Install the telephone set options (see paragraph 3.05).

(6) Replace housing and faceplate.

Fig. 5—833A-50 Adapter With 268A Adapter and 683AE Transmitter

Fig. 6—Mounting Telephone Set Base onto 833A-50 Adapter

3.03 A D-180656 Kit of Parts may be ordered separately for shelf mounting of all BM or CM sets. The 840362446 shelf should be mounted to a wall or vertical surface and, after placing the telephone set on the shelf, secure set with retainer clamp and screw furnished with the shelf. Refer to paragraph 2.13 for ordering information.

Caution 1: *The ten button key in this set is equipped with special low-friction plastic parts. Special care is required when removing or replacing these keys to avoid cracking or breaking the plastic hooked end of the latchbar projecting from the end of the key. When removing a key, avoid twisting or distorting the hook. When installing a key, make sure the hook is properly engaged over the edge of the pivot arm before tightening the mounting screws of the key.*

Caution 2: *When making wiring changes in this set involving adding or*

moving spade-tipped leads on the terminal board (e.g., privacy option), extreme care must be taken to prevent shorting between terminal positions. Check for clearance before reinstalling the dial.

3.04 To install telephone set options, the faceplate and housing must be removed and the dial lifted from its mounting brackets. Use a KS-21107 type releaser or equivalent to release the faceplate catch.

If telephone set is to be used at attendant station (Code 0) without ring transfer, remove (V-BR) lead from telephone set terminal 28; insulate and store. Otherwise the lamp under HOLD key will be lighted at all times.

Options

3.05 *Station Restriction (832-type telephone set):* Install as follows.

(1) Install 533K diode ~~for~~ equivalent ~~between~~ between network terminals RR and F. Terminate negative lead of diode on terminal F, with positive lead on terminal RR.

(2) On telephone set terminal board, move (G) lead from terminal 22 to 4, and (R) lead from terminal 4 to 22.

3.06 Station Restriction (2832-type telephone set): On telephone set terminal board, move (G) lead from terminal 22 to 4, and (R) lead from terminal 4 to 22.

3.07 Privacy Circuit (D-180486 Kit of Parts) 832A (MD), 2832A (MD), 832B (MD), BM, DM, 2832B (MD), BM, or DM telephone set: Install as follows.

(1) Mount privacy circuit board on the two standoffs located at left front of the telephone set base (Fig. 3).

(2) Fasten circuit board to standoffs using mounting screws furnished with the telephone set.

(3) Connect leads according to Table C.

(4) Refer to paragraph 3.18 for testing the privacy release key.

3.08 Privacy Circuit (D-180486 Kit of Parts) disabling, 832-type telephone sets:

Remove (O) and (BK) leads of Privacy Circuit from telephone set terminal 8 and 12, respectively, and insulate and store, see Table D.

3.09 PRIV RLS (D-180488 Kit of Parts) 832A (MD) or 2832A (MD) sets only:

Install as follows.

(1) Pry apparatus blank off locating pins.

(2) Press PRIV RLS key on locating pins.

(3) Connect leads according to Table E.

(4) Refer to paragraph 3.18 for testing the privacy release key.

Note: When PRIV RLS is used, RING TRANSFER or RECALL feature cannot be used.

3.10 To Disable PRIV RLS Key: Move (O-BK) lead of privacy release key from telephone set terminal 10 to 15, see Table F.

3.11 RING TRANSFER (D-180487 Kit of Parts) 832A (MD) or 832A (MD) telephone sets attendant station (Code 0) only: Install as follows.

(1) Pry apparatus blank off locating pins.

(2) Press ring transfer key on locating pins.

(3) Connect leads according to Table G.

(4) Refer to Section 518-450-100 for KSU strap addition.

Note: When RING TRANSFER is used, PRIV RLS or RECALL cannot be used.

3.12 RING TRANSFER (Position 3 of Top Key) 832C (MD), CM and 2832C (MD), CM telephone set: Install as follows.

(1) Connect leads per Table H.

(2) Refer to Section 518-450-100 for KSU strap addition.

3.13 RECALL (D-180591 Kit of Parts) 832A (MD) or 2832A (MD) telephone sets only: Install as follows.

(1) Pry apparatus blank off locating pins.

(2) Press recall key on locating pins.

(3) Connect leads according to Table I.

Note: When RECALL is used, PRIV RLS or RING TRANSFER cannot be used.

3.14 HANDS FREE ANSWER INTERCOM (HFAI): Install as follows.

(1) If feature is to be added to DM- or EM-type set, a 268A adapter must be used as follows.

(a) Mount 268A adapter onto 833A-50 adapter with two screws as shown on Fig. 5 with the tabs of the 268A adapter facing outward from the vertical surface. The 683AE-50 transmitter is secured by sliding the transmitter downward between the tabs on the adapter. The telephone set end of the transmitter cord enters the telephone set and is attached to the telephone set

base at the small notch on the top edge of the base panel. The excess cord is stored in the 833A-50 adapter.

- (2) For B (MD), BM or C (MD), CM (desk type) sets, the transmitter cord will enter at the rear of the set.

- (3) Refer to Table J for connections.

Note: It may be necessary to slightly reduce the volume of the 683AE transmitter if distortion or feedback is noticed when the HFAI feature is used.

- (4) Also included with the 683AE transmitter (furnished with the HFAI feature) is a manual DO-NOT-DISTURB switch. Depression of the switch (Fig. 5) prevents voice signaling, alerting tone, and activation of the microphone. A distinctive tone is sent to any station that is calling another station on *dial intercom* when the called station does not want to be disturbed. The only signal that can be received by a station or answering position with the DO-NOT-DISTURB switch activated are tone ringing and the alerting tone and one way voice signaling associated with an *automatic signaling intercom*.

3.15 **Automatic and Manual DO-NOT-DISTURB (DND) Feature, COM KEY 718 and 2152 Key Telephone Systems:** Install as follows.

- (1) This feature permits a station user to block any incoming dial intercom and DSS calls. Use of this feature alerts the calling party that the called party does not want to be disturbed. This is accomplished by returning an audible tone (500 Hz, continuous) to the calling party whenever either the automatic or manual DND feature is activated. In COM KEY 2152 key telephone system, a visual signal is also provided on the DSS console when the manual DND feature is in use. The COM KEY 2152 key telephone system currently provides a manual DND option but it is only available on station sets that are equipped with the HFAI option. The major difference between the automatic and manual DND option is that automatic is activated only when the station set is off-hook, while the manual can be activated with the station on-hook or off-hook.

- (2) Refer to (Fig. 7) for telephone set modification for automatic DND feature.

- (3) Refer to Section 518-450-100 for necessary KTU and KSU connection information with the DND feature.

- (4) For manual DND feature with these telephone sets, a 688A key must be ordered separately and installed as follows.

- (a) Attach the key on the right side of the telephone set baseplate and under the set housing.

- (b) Modify the telephone set wiring and terminate the spade-tipped key leads as shown in the appropriate modification table (Fig. 8).

- (c) Refer to Section 518-450-100 for necessary KTU and KSU connection information with the DND feature.

3.16 **Four-Wire Service (D-180990 Kit of Parts, Ordered Separately):** Install as follows.

- (1) Mount the relay assembly in the front right-hand corner of the telephone set using mounting bracket and screws as shown in Fig. 4.

- (2) Connect the relay spade-tipped leads as shown in Table K and Fig. 9.

Note: It will be necessary to run D-Station wire for 4-wire service due to insufficient mounting cord conductors.

- (3) Refer to Sections 518-450-100 for 7A and 518-450-110 for 21A Communication System interconnecting wiring arrangement.

3.17 **Electromagnetic Interference (EMI) D-180883 Kit of Parts (ordered separately):** An amplifier printed wiring board assembly, equipped with Radio Frequency Interference (RFI) suppression is available and is a direct replacement for the amplifier board furnished with these telephone sets.

3.18 **Privacy Circuit/Privacy Release Test:** Proceed as follows.

- (a) Busy out a line using another station (Station X). At the set with the privacy circuit to be tested (Station Y), go off-hook on same line. Station Y should be locked out. Hang up Station Y.

- (b) If Station X has a privacy release key, depress it. The lamp under the busy line will indicate it is on-hold. Station Y should now be able to pick up the line on hold. Release the privacy release key, Station X and Y should now be bridged. Hang up Station Y.
- (c) If Station X does not have a privacy release key, or a privacy circuit, he can allow Station Y in on the line by just placing the line on-hold by depressing the Hold button (this also releases the line button). Station Y should now be able to pickup the line on hold. Now depress the same button at Station X, the stations should be bridged. Hang up Station Y.
- (d) If Station X does not have a privacy release key but does have a privacy circuit, he cannot allow Station Y to bridge onto the call without excluding himself.
- (e) With the line still busied out by Station X and Station Y not bridged, depress a different line on Station Y and go off-hook. While holding that line button depressed bridge onto the line that was busied out by Station X. Station Y should be locked out of both lines.

3.19 When installing faceplate, insure that the collar is in place on the key. Place the tabs into slots in front of the faceplate opening in the housing and lower slowly over the dial and key collar until almost in place. Use a KS-21107 type releaser or equivalent to release the faceplate catch and seat the faceplate.

3.20 The 647G5 key uses key designation tabs form E-5837, E-6672, and the 647S5, 651-type keys use key designation tabs form E-6672. To install, squeeze sides of the cap and remove from key. Insert designation tabs and replace cap with locking tabs along the horizontal axis of the key.

3.21 For telephone set station number cards, use form E-10360, E-10364-(see Note), or E-10368-(see Note), for rotary dial sets and form E-10361, E-10365-(see Note), or E-10369-(see Note) for TOUCH-TONE dialing sets.

Note: Requires that area code be added.

3.22 Refer to Fig. 10 through 19 for telephone set schematics.

3.23 Refer to Section 512-620-487 or 512-740-471 for connections to 3-type (MD) or 4A speaker-telephone systems, respectively.

3.24 Early version of 832- and 2832-type telephone sets were equipped with a D50AL mounting cord which require contact strips to be installed in the back of the keys. Current production 832- and 2832-type telephone sets are equipped with a D50AP mounting cord. The D50AP mounting cord is a direct replacement for the D50AL mounting cord but does not require that contact strips be installed in the back of the keys.

Do not install contact strips in the back of the key when telephone sets are equipped with a D50AP mounting cord. Wires are factory provided in this cord from the key terminal plugs to the set terminal board. Use of contact strips may damage terminal plugs.

3.25 If Power Failure Transfer feature is to be provided, use an external ringer [E1C (MD) or E1CM] and connect as shown in Table L.

4. MAINTENANCE

4.01 Maintenance of the 832- and 2832-type telephone sets should be limited to checking for loose or broken connections and replacement of items listed under Ordering Guide table as replaceable components.

Telephone set should not be carried by the switchhook since this applies excessive strain to the line switch and could cause a trouble condition.

4.02 The current production 647-type key has been modified for easy lamp replacement by merely removing the lamp cap and inserting a 553-type tool through the hole in the top of the button. In early production keys, it is necessary to remove faceplate, key collar, and button for lamp replacement.
