

3A SPEAKERPHONE

CONTENTS

1. GENERAL
2. DETAIL

1. GENERAL

1.01 This supplement is to be filed in front of the corresponding Bell System Practice and will remain in effect until cancelled or superseded. It will not be affected by the cancellation or reissue of the corresponding Bell System Practice, its Addenda or Supplement.

1.02 This supplement is being issued to point out a condition that could result in a trouble report.

2. DETAIL

2.01 As the switch guard circuit in the 3A speakerphone uses the voltage across the loudspeaker to prevent false switching caused by any incoming speech from the loudspeaker, which may reach the transmitter, it will also prevent the subscriber at the speakerphone from interrupting the other party if the volume control on the speakerphone is turned up too high.

2.02 The customer should be informed of this by the installer when installing the 3A Speakerphone.
