

10-A1 Key System gives you 2 big extras!

1. Modern, streamlined telephones 2. A E relays—famous for dependability

Take a close look at the first extra—the Type 86 Telephone—used in Automatic's new 10-A1 Key System. Here's all the beauty and transmission quality of our Type 80 plus finger-fitting pushbuttons (lighted to act also as signals). You'll find the eye-appeal of the Type 86 is a big "extra" with subscribers—an extra they can readily see!

There's a second big extra in the 10-A1 Key System—one that can't be seen. It's A.E. relays, the "workhorse" in hundreds of exchanges all over the country—and with a proven record for dependability as part of Strowger systems. *You couldn't have better assurance.*

10-A1 Key System offers many feature combinations:

- Access to as many as six central-office, P.B.X., or private lines.
- Pushbutton "holding"—hold up to five lines.
- Dial or pushbutton-signaling intercom.
- Tie lines—link one key system with another.
- Visible and audible signaling.
- Lighted plastic buttons are also line signals.
- 4 and 6-button key telephones—in 10 colors or black.
- Automatic or manual exclusion.

You'll find prospects for the 10-A1 just about everywhere—banks, commercial garages, real estate agencies and in many other small offices. And keep this in mind: the 10-A1 Key System is fully compatible with the W.E. 1A1 System.
