ITT

Push Button Convenience at Your Fingertips

The K-1A1 Key Telephone System enables one or more push-button telephones to share up to five lines for answering, originating, holding, intercommunicating or transferring calls without the assistance of an attendant or operator.

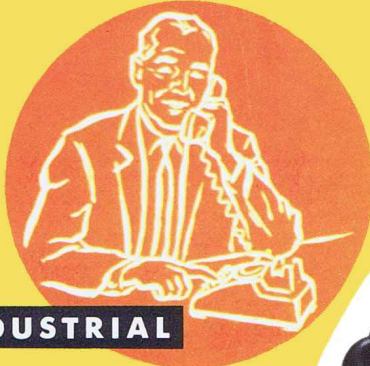

—Answer and originate calls on from one to five Central Office, private branch exchange, inter-

communicating, private lines, or combinations thereof.

—Hold calls at all telephones.

—Answer and originate calls on manual or dial intercommunicating lines between telephones in a K-1A1 Key Telephone System.

—Privacy on calls—the executive exclusion feature can be provided when privacy is desired.

INDUSTRIAL

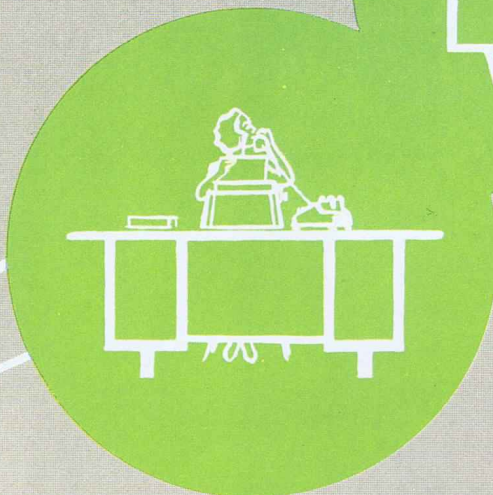

PROFESSIONAL

MILITARY

Whatever your business needs, Kellogg can provide a Push-Button telephone system which will give you greater flexibility, more convenience, increased efficiency, and improved service to your customers.

OUTSIDE CALLS

You can place or receive calls on any one of these four buttons. The secretary can answer any line in the office from the telephone on her desk, or she can transfer calls to other telephones, all without the need of walking from one desk to another.

INTERCOMMUNICATIONS CALL

One button connects you to the intercom line, allowing two or more people to confer from their own desks with a consequent saving in time and energy.

HOLDING

You can hold a call on one line while answering or placing a call on another. When you complete the second call, you can return to the first. This saves both time and money for you, as well as your customer because it eliminates a "call back".

• • A BETTER WAY TO COMMUNICATE

MORE CONVENIENCE FROM KELLOGG

K-575

This telephone embodies the advantages of the selection of two lines *plus* a "hold" device. Simply by lifting the left-hand plunger, either line may be "held" which permits the use of the other line.

K-510

Here is a telephone which provides the selection of either of two lines. By depressing the line selection turn button, manual signalling is permitted. This is an option with the K-510.

K-544

The four button K-544 may be connected to three incoming lines, or like the six button, wiring may be varied to meet specific applications . . . for example, two subscriber lines and one tie-line.

K-1A1 FEATURES

HOLD

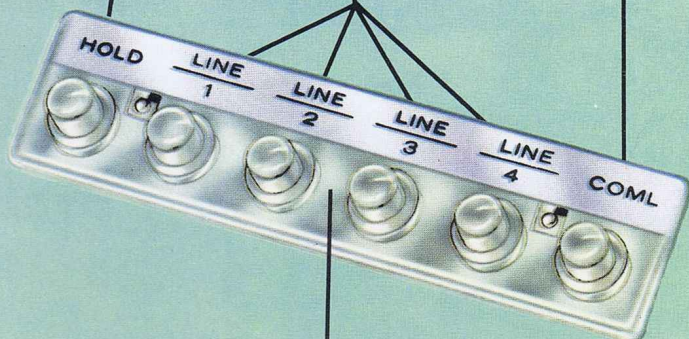

Just press hold button to "hold" one call, then press line pick-up button to answer or place another call. A visual flashing signal may be provided for each line pick-up button as a reminder that a line is being "held."

LINE PICK-UP BUTTONS

Central Office or private branch exchange line pick-up buttons illuminated for visual indication flash signals for incoming calls — steady light on lines in use — Lights show on all telephones simultaneously.

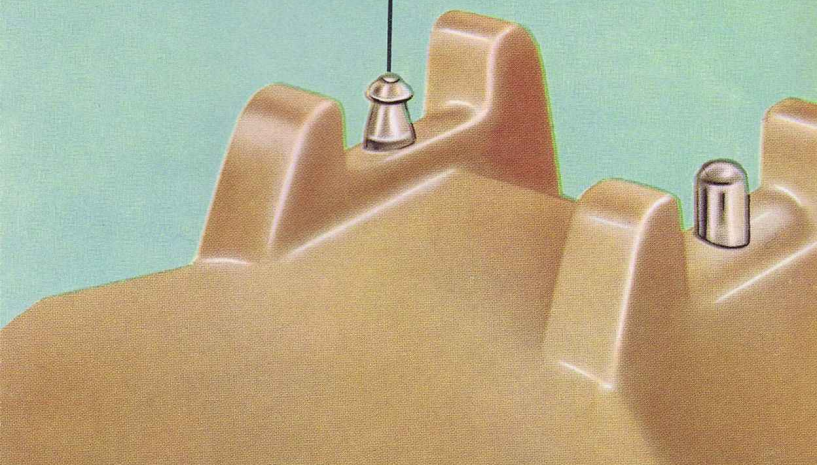

INTERCOM

Dial or manual intercom line. No need of purchasing a separate phone system for inter-office calls.

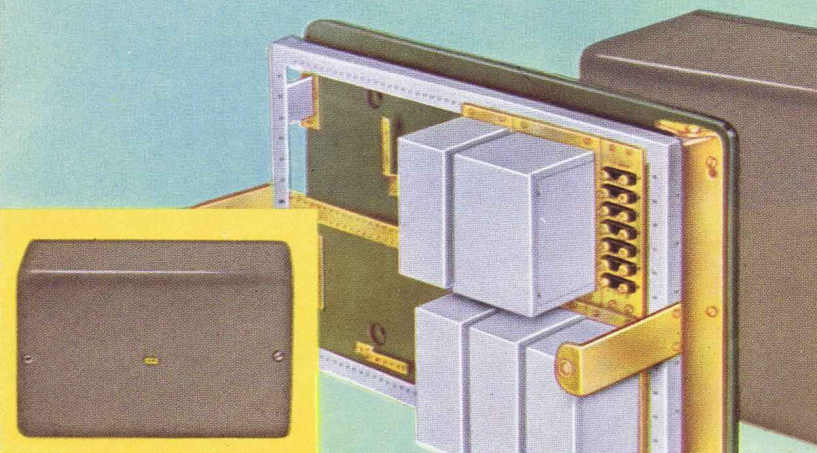

EXECUTIVE EXCLUSION FEATURE

The K-1A1 may be equipped to cut other telephones off the line by lifting the plunger, permitting confidential calls. The line is automatically restored when the handset is replaced.

APPARATUS CABINET

The operating equipment is housed in one compact cabinet which permits its installation at almost any desired wall location. This also allows expansion when needed without moving or re-arranging the apparatus.

HERE IS HOW

K-1A1

CAN SOLVE

Your

**COMMUNICATIONS
PROBLEM**

The Problem

1. Distinguishing which phone to answer.
2. Valuable desk space cluttered with telephones.
3. Lost time in transferring calls.
4. Outsiders overhearing private conversations.
5. Shouting or running from one desk to another.
6. Losing time and money in "call-backs."
7. Interruptions in phone conversations.

The Solution

1. Visual signals to indicate incoming calls.
2. One phone with complete versatility.
3. No need to call an office switchboard to transfer a call.
4. Exclusion button prevents other users from obtaining the line.
5. Intercom button permits conversations with other desks without leaving your own.
6. The "hold" feature allows the holding of one line while another is used.
7. Illuminated buttons insure rapid identification of incoming calls and busy lines—avoids interruption of calls in progress.
