Bell System

telephone answering bureau serve customers in distant areas . . . competitively, economically, profitably

TCI Library | www.telephonecollecto

- ☐ Their answering-service calls come through to your office on 2 to 6 trunk lines, depending on the number of customers.
- ☐ An Identifier located on your premises "sorts out" these calls and passes them to the right switchboard jack.
- ☐ It works just as though each distant customer had his own trunk line right into your office.
- All this is done automatically.

- ☐ Lets you open a "branch office" in areas previously considered too small or unprofitable.
- ☐ Lets you offer rates that are attractive and competitive.

ECONOMY AND INCREASED EFFICIENCY

☐ You save the costs of opening a branch office — capital expenditure, personnel, extra overhead.

☐ Operations are simplified — all under one roof, and training is easier, quicker, more efficient.

FLEXIBILITY

- ☐ Capacity may be expanded to meet your growth needs-from 40 to 100 customer lines; 2 to 6 trunks.
- ☐ Compact equipment takes up little floor space.
- ☐ Ties to your switchboard without any noticeable effect to operators or customers. TCI Library | www.telephonecollectors.info

The Bell System C-I line Concentration Service is designed to assist you in expanding the scope and profitability of your business. The equipment that makes this possible was especially developed for the Telephone Answering Industry by Bell Telephone Laboratories.
