EMERGENCY REPORTING TELEPHONE SYSTEM

this cost-saving network of special
telephones permits quick, accurate voice
reporting of emergencies

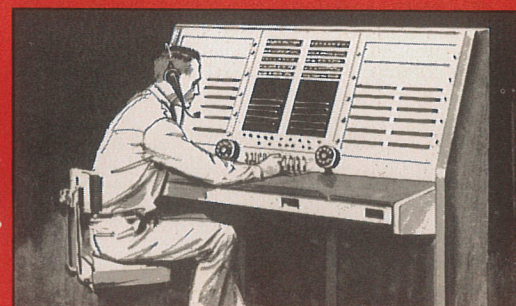

how it works . . .

1. IN AN EMERGENCY, any person can immediately call for help from the nearest telephone call box, using the familiar telephone handset and giving a voice report.

2. AT THE CONTROL CENTER, your dispatcher gets all the needed facts quickly. As soon as the handset is lifted, a printed record of the time, date and call-box number is automatically made.

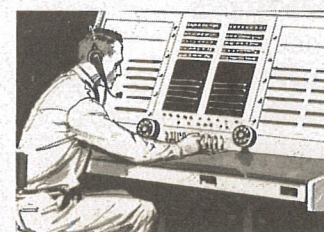

3. WHEN A FIRE IS REPORTED, the dispatcher calls the needed company or companies, gives them the facts, and directs them to the exact location with the necessary equipment.

4. WHEN A POLICE MATTER IS REPORTED, the call is immediately routed to your police dispatcher, who summons squad car, ambulance or whatever emergency units are required.

DOUBLES AS POLICE CALL-IN BOX

Each telephone box can be equipped with a pushbutton mounted just above the handset. By depressing this special button, policemen can bypass control center and be connected directly to police headquarters.

GIVES EXCELLENT PROTECTION

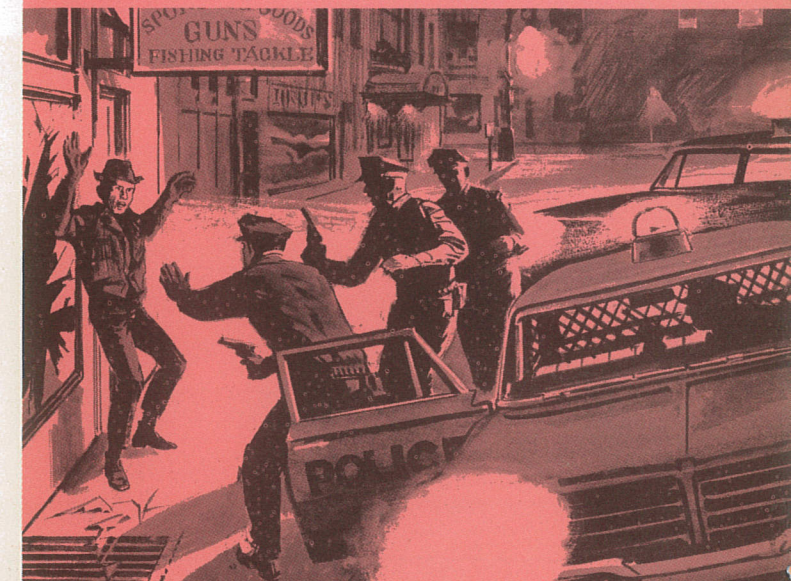

- ☐ Lets any person report an emergency.
 - Saves crucial seconds in the first vital moments, when time counts most.
- ☐ Emergency caller can give the needed details, answer specific questions.
 - Helps get the right men and equipment to the right location quickly.
 - Helps dispatcher to decide what and how much equipment is needed.
 - Minimizes the costly, tragic errors that may occur when emergencies are not fully or accurately reported.
- ☐ One reporting center for all types of emergencies improves the efficiency of your community-protection services.
 - Helps reduce the errors and delays that may result from uncoordinated or less detailed reporting.
 - Automatic recording provides reliable record of each call.
- ☐ Built-in safeguards insure the dependable operation of your system.
 - Circuits are continually self-tested.
 - Audible and visual alarms immediately warn dispatcher of service interruption.

KEEPS YOUR COSTS LOW

- ☐ No capital investment required.
 - All equipment is supplied by your Bell Telephone Company.
 - No bonded indebtedness, interest or depreciation fund required.
 - Reliable maintenance at no extra cost.
- ☐ Easily modified as your needs change.
 - Lets you locate special phones where you need them — and as many as you need.
 - Box locations can be rearranged on short notice — flexible, versatile.
 - Teletypewriter networks to fire stations can provide printed verification of all emergencies and handle administrative communications as well.
 - Special circuits to operate loudspeakers, sound alarms, turn on lights, record messages and perform other services are also available, tailored to your needs.
- ☐ Lowers costs of your operations.
 - Discourages false alarms because phoned-in reports are recorded — helps to reduce needless wear and tear on rolling stock and risk to personnel.
 - Accurate telephone reporting permits maximum effective use of equipment, makes duplication or overlap unnecessary.

FIRE COMPANIES can be dispatched more promptly and accurately to arrive on the scene faster when lives and property may hang in the balance.

POLICE MATTERS receive speedy response, and coordination in reporting and dispatching help to increase the effective coverage of your units.

IN OTHER EMERGENCIES, voice reporting helps get the right men and equipment dispatched quickly — helps keep a serious situation from becoming a disaster.
