U. S. A.

**DESK
TELEPHONES**

Types "C" and "D"

*Our Complete Catalogue of Telephones and Supplies
will be sent upon application.*

Type "C" Desk Telephone.

These instruments are made up in the most substantial manner, highly polished and nicked, and fitted with either single or double pole Receivers, Long Distance Transmitters and Platinum Contacts.

They are also fitted with a flat Hook spring instead of the spiral spring found on all of this class of instruments, therefore, this very important part of the instrument is greatly strengthened and will, consequently, be free from the bad effects of a weak spring so common in the old type of desk 'Phone.

The Transmitter is mounted in a very clever manner and it is simply necessary to loosen two screws in order to remove the same.

The Cords terminate under binding screws mounted on an insulated block in the base so that it is not necessary to unsolder the cord connections when removing or renewing a cord.

The Induction Coil is mounted in a metallic case on the terminal block to which line wires and conducting cord are attached, thus making a very simple, neat and efficient device, easy to connect up.

Type "D" Desk Telephone.

The type "D" Desk 'Phone is the same in general appearance and construction as the type "C," except that the base is made a trifle larger so as to contain the induction coil which is mounted therein instead of on a Terminal Block, as in type "C."

A small Terminal Block on which are mounted binding posts only, is furnished with this style of instrument; also, silk conducting cord.

The small push button shown in base of the type "C" Desk 'Phone is used only on battery call instruments, but it can be used on magneto call instruments for cutting out the transmitter when so desired.

Price of type "D" Desk 'Phone same as type "C."

These instruments are carried in Stock,...

Wired for the following Systems:

No. 4. Wired for our Magneto Automatic Intercommunicating System.

Price, each, \$15.00.

No. 5. Wired for Magneto System, either Series or Bridging.

Price, each, \$15.00.

No. 25. Wired for our No. 30 Battery Call System.

Price, each, \$16.00.

No. 26. Wired for our No. 37 Battery Call System.

Price, each, \$16.00.

No. 27. Wired for our No. 20 Battery Call System.

Price, each, \$17.00.

No. 28. Wired for our No. 21 Battery Call System.

Price, each, \$16.00.

Prices are for either style "C" or "D" and include Terminal Block, Induction Coil, and Silk Conducting Cord.

Style of Hook shown on type "D" will be furnished on type "C" when so ordered.

Single or Double Pole Receiver furnished at option of purchaser.

Terminal Block for use with Type "C" Desk 'Phone.

The Terminal Block shown in accompanying cut is used with our type "C" Desk 'Phone. A silk, flexible conducting cord is connected from desk set to posts on the right hand side of block as shown, and Line, Battery and Bell wires are connected to the other side.

The iron box on Block covers the induction coil.
